## TECHNICAL SPECIFICATIONS

Beocenter 9500	Type 2506, 2508, 2509, 2510
Beocenter 8500	Type 2511, 2512, 2513, 2514
Operation	Direct, sensi-touch panel
	Beolink 7000, two-way (Type 2506, 2508, 2509, 2510)
	Beolink 1000, one-way
Long-term max. output power IEC	2 x 80 watts/8 ohms
Total harmonic distortion IHF	<0.1%/30 watts 20-20,000 Hz
Dynamic headroom	1 dB/8 ohms
Intermodulation IHF	<0.1 %

## Response vs frequency:

Phono	20-20,000 Hz $\pm 1.5$ dB
Tape	20-20,000 Hz $\pm 1.5$ dB
Wideband damping factor	50

## Input sensitivity/impedance:

Phono	0.36 mV/47 kohms
Tape 2 – AUX	36 mV/100 kohms
Microphone	0.04 mV/1 kohms

## Signal-to-noise ratio:

Phono A-weighted, 1 W IHF	>78 dB
Tape A-weighted, 1 W IHF	>80 dB
Tape A-weighted, 30 W output	>95 dB
Channel separation 10,000 Hz	>60 dB

## Output:

Tape 2 – AUX	500 mV/1 kohms
External power amplifier	1 V/1 kohms
Headphones	Max. 8 V/220 ohms
Bass control at 40 Hz	$\pm 10$ dB
Treble control at 12,500 Hz	$\pm 8$ dB

## FM tuner section:

FM range	76-90 MHz (Type 2509, 2513)
	87.5-108 MHz (Type 2506, 2508, 2510, 2511, 2512, 2514)
FM aerial impedance	75 ohms
Usable sensitivity mono	14 dBf – 1.4 $\mu$ V
Usable sensitivity stereo	19 dBf – 2.5 $\mu$ V
50 dB quiting sensitivity mono	19 dBf – 2.5 $\mu$ V
50 dB quiting sensitivity stereo	40 dBf – 28 $\mu$ V
Signal-to-noise ratio: 65 dBf mono	75 dB
65 dBf stereo	70 dB
Frequency response	20-15,000 Hz $\pm 1$ dB
Distortion at 65 dBf mono	0.16%
Distortion at 65 dBf stereo	0.2%
Intermodulation mono	0.1%
Intermodulation stereo	0.1%
Capture ratio	1.7 dB
Adjacent channel selectivity	10 dB
Alternate channel selectivity	70 dB
Spurious response	100 dB
Image response ratio	80 dB
IF response ratio	120 dB
AM suppression	57 dB

Stereo channel separation	45 dB
Subcarrier product rejection	70 dB

## AM tuner section:

LW range	150-350 kHz (Type 2506, 2511)
MW range	520-610 kHz (Type 2506, 2508, 2509, 2510, 2511, 2512, 2513, 2514)
LW sensitivity 20 dB S/N ratio	80 $\mu$ V
MW sensitivity 20 dB S/N ratio	60 $\mu$ V

## Tape recorder:

Compact cassette	C46 - C120
Recording system	HX PRO
Tape transport system	Auto Reverse
Search system	Auto Track
Record level	Auto Record Level
Noise reduction system	Auto Dolby B and C
Tape switch	Auto ferro/chrome/metal
Tape head	Sendust
Wow and flutter DIN	<0.15%
Wow and flutter WRMS	<0.09%
Speed deviation	< $\pm$ 1.5%
Fast forward and rewind	85 sec.
Frequency range chrome	30-18,000 Hz $\pm$ 3 dB

## Signal-to-noise ratio CCIR/ARM:

Metal Dolby	B: >64 dB, C: >73 dB
Chrome Dolby	B: >65 dB, C: >74 dB
Ferro Dolby	B: >63 dB, C: >72 dB

## Signal-to-noise ratio IEC/DIN:

Metal	>56 dB
Chrome	>56 dB
Ferro	>55 dB
Driveability 10,000 Hz, metal	0 dB
Chrome/ferro	-7 dB
Distortion ferro	<2%
Channel separation	>35 dB
Erasure	>70 dB
Erasure frequency	96 kHz

## CD player:

Disc types	12 cm (5"), 8 cm (3")
Frequency range	3-20,000 Hz $\pm$ 0.3 dB
Signal-to-noise ratio	>100 dB/110 dB A-weighted
Dynamic range	>96 dB
Harmonic distortion	0.0025% at 0 dB 0.0025% at -20 dB
Channel separation	>101 dB
Channel difference	<0.08 dB
Converter system	2 x 16 bit, 4 x oversampling
Low pass filter analog	Bessel
Damping >20,000 Hz	>50 dB
Phase error between L and R	0 degree at 20-20,000 Hz

**Connections:**

Audio Link	Tape 2, Phono (RIAA built-in)
Audio Aux Link	Beovision, 7-pin
Power Link	Beolab speakers, 2 sockets 8-pin
Speaker Link	Beovox speakers, 2 sockets 4-pin
Master Control Link	2 sockets 3 pin
Power supply	110-130-220-240 voltage switch (See list of electrical parts concerning power supply fuses) Type 2506, 2511 220 V Type 2508, 2512 130 V Type 2509, 2513 110 V Type 2510, 2514 240 V
Power frequency	50-60 Hz
Power consumption	Max. 200 watts
Dimensions W x H x D	76 x 11 x 34 cm
Weight	14 kg 31 lbs

**Subject to change without notice**

## Options:

### Et Beocenter i et Beolinksystem

Options eller situationer beskriver hvordan både audio- og videoprodukterne i et Beolinksystem skal programmeres i den valgte stilling.

#### Option 1 (Situation 1):

Et audio- og et videosystem placeres i samme rum, så signalerne fra Beolink terminalen kan opfanges af begge systemer samtidigt.

#### Option 2:

Audio- og videosystemet er placeret i hver sit rum, så signalerne fra Beolink terminalen kun kan opfanges af ét system ad gangen.

Beocenter 8500/9500 i Master Control Link 2-systemet:

#### Option 3:

Anvendes når der er to audioskilder i samme rum (f.eks.: en MCL2-enhed og en Beocenter 8500/9500).

#### Option 4:

Anvendes når der er to audio- og en videokilde i samme rum (f.eks.: MCL2, Beocenter og Beovision).

#### Option 0:

Sætter IR-føler ud af funktion, hvilket kan udnyttes f.eks. i butiksvinduer eller ved udstillinger. Der kan dog stadig vælges ny option med Beolink terminalen.

### Programmering:

Options programmeres med Beolink terminalen, med Beocenter 8500/9500 i standby:

Tast: **[SOUND]**, Option nr. **[STORE]**  
Display viser: Option nr.

Beocenter 8500/9500 er fra fabrikken programmeret til option 1.

### Stikdåserne Line in/out og AUX/TV:

Line in/out anvendes ved tilslutning af en equalizer. Husk kortslutningsprop (bestillingsnr. 7220265) når equalizer ikke er tilsluttet.

AUX/TV anvendes ved tilslutning af et Beolink-kompatibelt fjernsyn eller en Bang & Olufsen båndoptager.

## Options:

### A Beocenter in a Beolink System

Options or situations describe how both the audio and video products in a Beolink system are programmed in the chosen setting.

#### Option 1 (Situation 1):

An audio and a video system are placed in the same room so the signals from Beolink terminal can be received by both systems at the same time.

#### Option 2:

The audio and video systems are placed in separate rooms so the signals from Beolink terminal can only be received by one system at a time.

Beocenter 8500/9500 in the Master Control Link 2 system:

#### Option 3:

Is used when there are two audio sources in the same room (e.g. an MCL2 unit and a Beocenter 8500/9500).

#### Option 4:

Is used when there are two audio sources and one video source in the same room (e.g. MCL2, Beocenter and Beovision).

#### Option 0:

Puts the IR sensor out of operation; this can be used in shop windows or at exhibitions for example. However, new options can still be selected with Beolink terminal.

### Programming:

Options are programmed with Beolink terminal, with Beocenter 8500/9500 in standby:

Key: **[SOUND]**, Option no. **[STORE]**  
Display shows Option no.

Beocenter 8500/9500 is programmed at the factory to option 1.

### The Line in/out and AUX/TV sockets:

Line in/out is used for connecting an equalizer. Remember short-circuiting fuse (order no. 7220265) when the equalizer is not connected. AUX/TV is used for connecting a Beolink-compatible television or a Bang & Olufsen cassette recorder.

**DIAGRAMFORKLARING**

På diagrammerne er der angivet typenumre på transistorer og IC'er. Hvis positionsnummeret er efterfulgt af en stjerne, skal reservedelsnummeret altid benyttes, da denne komponent er specielt udvalgt, f.eks. TR102\*.

**Komponenttryk og koordinatsystem**

De største printplader er forsynet med komponenttryk og et koordinatsystem på både print- og komponentside.

På diagrammerne er enhver komponent forsynet med et koordinatnummer. Dette fortæller i hvilket koordinat på printpladen, komponenten er placeret. Koordinatnumrene er angivet med mindre skrifttype end positionsnumrene.

**Styrekredsløb**

I visse styrekredsløb er den aktive tilstand angivet med en funktions- eller bogstavsangivelse. Denne kan eksempelvis være ST.BY. = »low« i stand-by-stilling eller ST.BY. = »high« i stand-by-stilling.

**Ledningsforbindelser**

Ledningsforbindelserne på diagrammerne er samlet i »bundter«. De enkelte ledninger er forsynet med en af følgende koder:

**INTERN FORBINDELSE PÅ EN DIAGRAMSIDE**

Interne forbindelser på en diagramside angives med et tal. Knækket på ledningen viser, i hvilken retning, den anden ende af ledningen findes.

**FORBINDELSE TIL EN ANDEN DIAGRAMSIDE**

Forbindelsen til en anden diagramside angives med et tal samt et bogstav for det diagram, forbindelsen går til.

**Forsyningsspændinger**

Alle forsyningsspændinger i diagrammerne er angivet med en pil og en spændingsangivelse.

**Eksempel:**

Ved siden af spændingsangivelsen står der f.eks. 7 CON. Dette betyder, at den pågældende forsyningsspænding går til 7 steder på den pågældende diagramside (7 CON. = 7 connections).

**EXPLANATION OF DIAGRAM**

Type numbers of transistors and ICs are indicated on the diagrams.

If the position number is followed by an asterisk the spare part number must always be used because the component in question has been specially selected, e.g. TR102\*.

**Component print and coordinate system**

The largest PCBs have component prints and a coordinate system on both the print and the component side.

On the diagrams every component has a coordinate number. This indicates in which coordinate on the PCB the component is situated. The coordinate numbers are written in smaller print types than the position numbers.

**Control Circuit**

In certain control circuits the active mode is indicated by a function term or by an abbreviation. This may be e.g. ST.BY. = low in the stand-by mode or ST.BY. = high in the stand-by mode.

**Wiring Connections**

The wiring connections on the diagrams are assembled in 'bundles'. The individual wires are provided with one of the following codes:

**INTERNAL CONNECTION ON ONE DIAGRAM PAGE**

Internal connections on a diagram page are indicated by a number. The bend of the wire indicates in which direction the other end of the wire is found.

**CONNECTION TO ANOTHER DIAGRAM PAGE**

A connection to another diagram page is indicated by a number as well as by a letter of the diagram to which the connection leads.

**Supply Voltages**

All supply voltages in the diagrams are indicated by an arrow and a voltage indication.

**Example:**

"7 CON." This means that the supply voltage in question goes to 7 different places on the diagram page in question (7 CON. = 7 connections).

## Symbol for sikkerhedskomponenter

## Symbol for Safety Components

Ved udskiftning af komponenter med dette symbol skal der anvendes komponenter med samme reservedelsnummer. Den nye komponent skal monteres på samme måde som den udskiftede.

When replacing components with this symbol components with identical part numbers are to be used. The new component must be fitted in the same way as the one replaced.

## MÅLEBETINGELSER

Alle DC spændinger er målt til stel med voltmeter (indre modstand på 10 Mohms).

DC spændinger er opgivet i volt (V). Eks. 0,7 V. Spændinger på diagram A er målt i stilling FM, spændingerne i parentes er målt i stilling MW, spændingerne i firkantet parentes er målt i stilling LW.

Spændingerne på diagram C er målt med 1 W udgangseffekt.

Signalveje er vist for henholdsvis FM, AM, fjernbetjening og for LF højre kanal.

## MEASURING CONDITIONS

All DC voltages are measured in relation to chassis with a voltmeter (internal resistor 10 Mohms).

DC voltages are stated in volts (V). E.g. 0.7 V. Voltages in diagram A are measured in FM mode signal, the voltages in parentheses are measured in MW mode, the voltages in quadrangular parentheses are measured in LW mode.

Voltages in diagram C are measured with 1 W output level.

The signal paths are shown for FM, AM, remote control and AF right channel.

## Båndoptager

Spændinger: Stilling gengive (333 Hz 250 pWb mm).

AC spændinger opgivet i millivolt (mV). Eks. 733 mV.

DC spændinger opgivet i volt (V). Eks. 0,7 V.

Signalvejen i optage position er vist i venstre kanal, og gengive position er vist i højre kanal.

Oscillogrammerne på diagram F er målt i stilling »Play«. Læg et bånd i der er indspillet med Dolby B på Beocenter 8500/9500. Under indspilningen må der ikke være tilført eksternt signal.

Oscillogrammerne på diagram D er målt i stilling »Record« uden signal tilført.

## Tape recorder

Voltages: Position play back (333 Hz 250 pWb mm).

AC voltages stated in millivolts (mV). Ex.: 733 mV.

DC voltages stated in volts (V). Ex.: 0.7 V.

The signal path in recording pos. is shown in left channel, and replay pos. is shown in right channel.

The oscillograms in diagram F are measured in "Play" mode. Insert a tape which has been recorded with Dolby B noise reduction in the Beocenter 8500/9500. The recording must not be supplied with any external signal.

The oscillograms in diagram D are measured in "Record" mode without signal supplied.

## STELSYMBOLER

Der anvendes 3 forskellige stelsymboler i apparatet.

## GROUND SYMBOLS

Three different ground symbols are used in the set.

**ADVARSEL**

Kortslutning og overopladning af visse typer lithium-batterier kan medføre voldsom eksplosion.

Ved udskiftning af lithium-batteriet i dette apparat skal følgende iagttages:

*Beocenter 8500:*

Der **skal** anvendes batteri af samme fabrikat og type som angivet i denne service manual (se side 3-8).

Batteriet skal monteres nøjagtigt som det originale batteri.

*Beocenter 9500:*

Returner mikroprocessormodulet, bestillingsnr. 8001130 for ombytning.

**WARNING**

Short circuit and overcharging of some types of lithium batteries may result in a violent explosion.

When replacing the lithium battery in this set note the following:

*Beocenter 8500:*

Use **only** batteries of the same make and type as mentioned in this service manual (see page 3-8).

Place the battery exactly like the old one.

*Beocenter 9500:*

Return the microprocessor module, part no. 8001130 for replacement.

Explanation of the fuse symbols used in the set

Explanation des symboles du fusible utilisés dans l'appareil

Replace with same type 4 ampere 250 volts slow acting fuse.  
Remplacer par un fusible retardé de même type et de 4 ampères 250 volts.

Replace with same type 2.5 ampere 250 volts slow acting fuse.  
Remplacer par un fusible retardé de même type et de 2.5 ampères 250 volts.

Replace with same type 1.6 ampere 250 volts slow acting fuse.  
Remplacer par un fusible retardé de même type et de 1.6 ampères 250 volts.

Replace with same type 4 ampere 125 volts slow acting fuse.  
Remplacer par un fusible retardé de même type et de 4 ampères 125 volts.

Replace with same type 2.5 ampere 125 volts slow acting fuse.  
Remplacer par un fusible retardé de même type et de 2.5 ampères 125 volts.

Replace with same type 5 ampere 125 volts slow acting fuse.  
Remplacer par un fusible retardé de même type et de 5 ampères 125 volts.

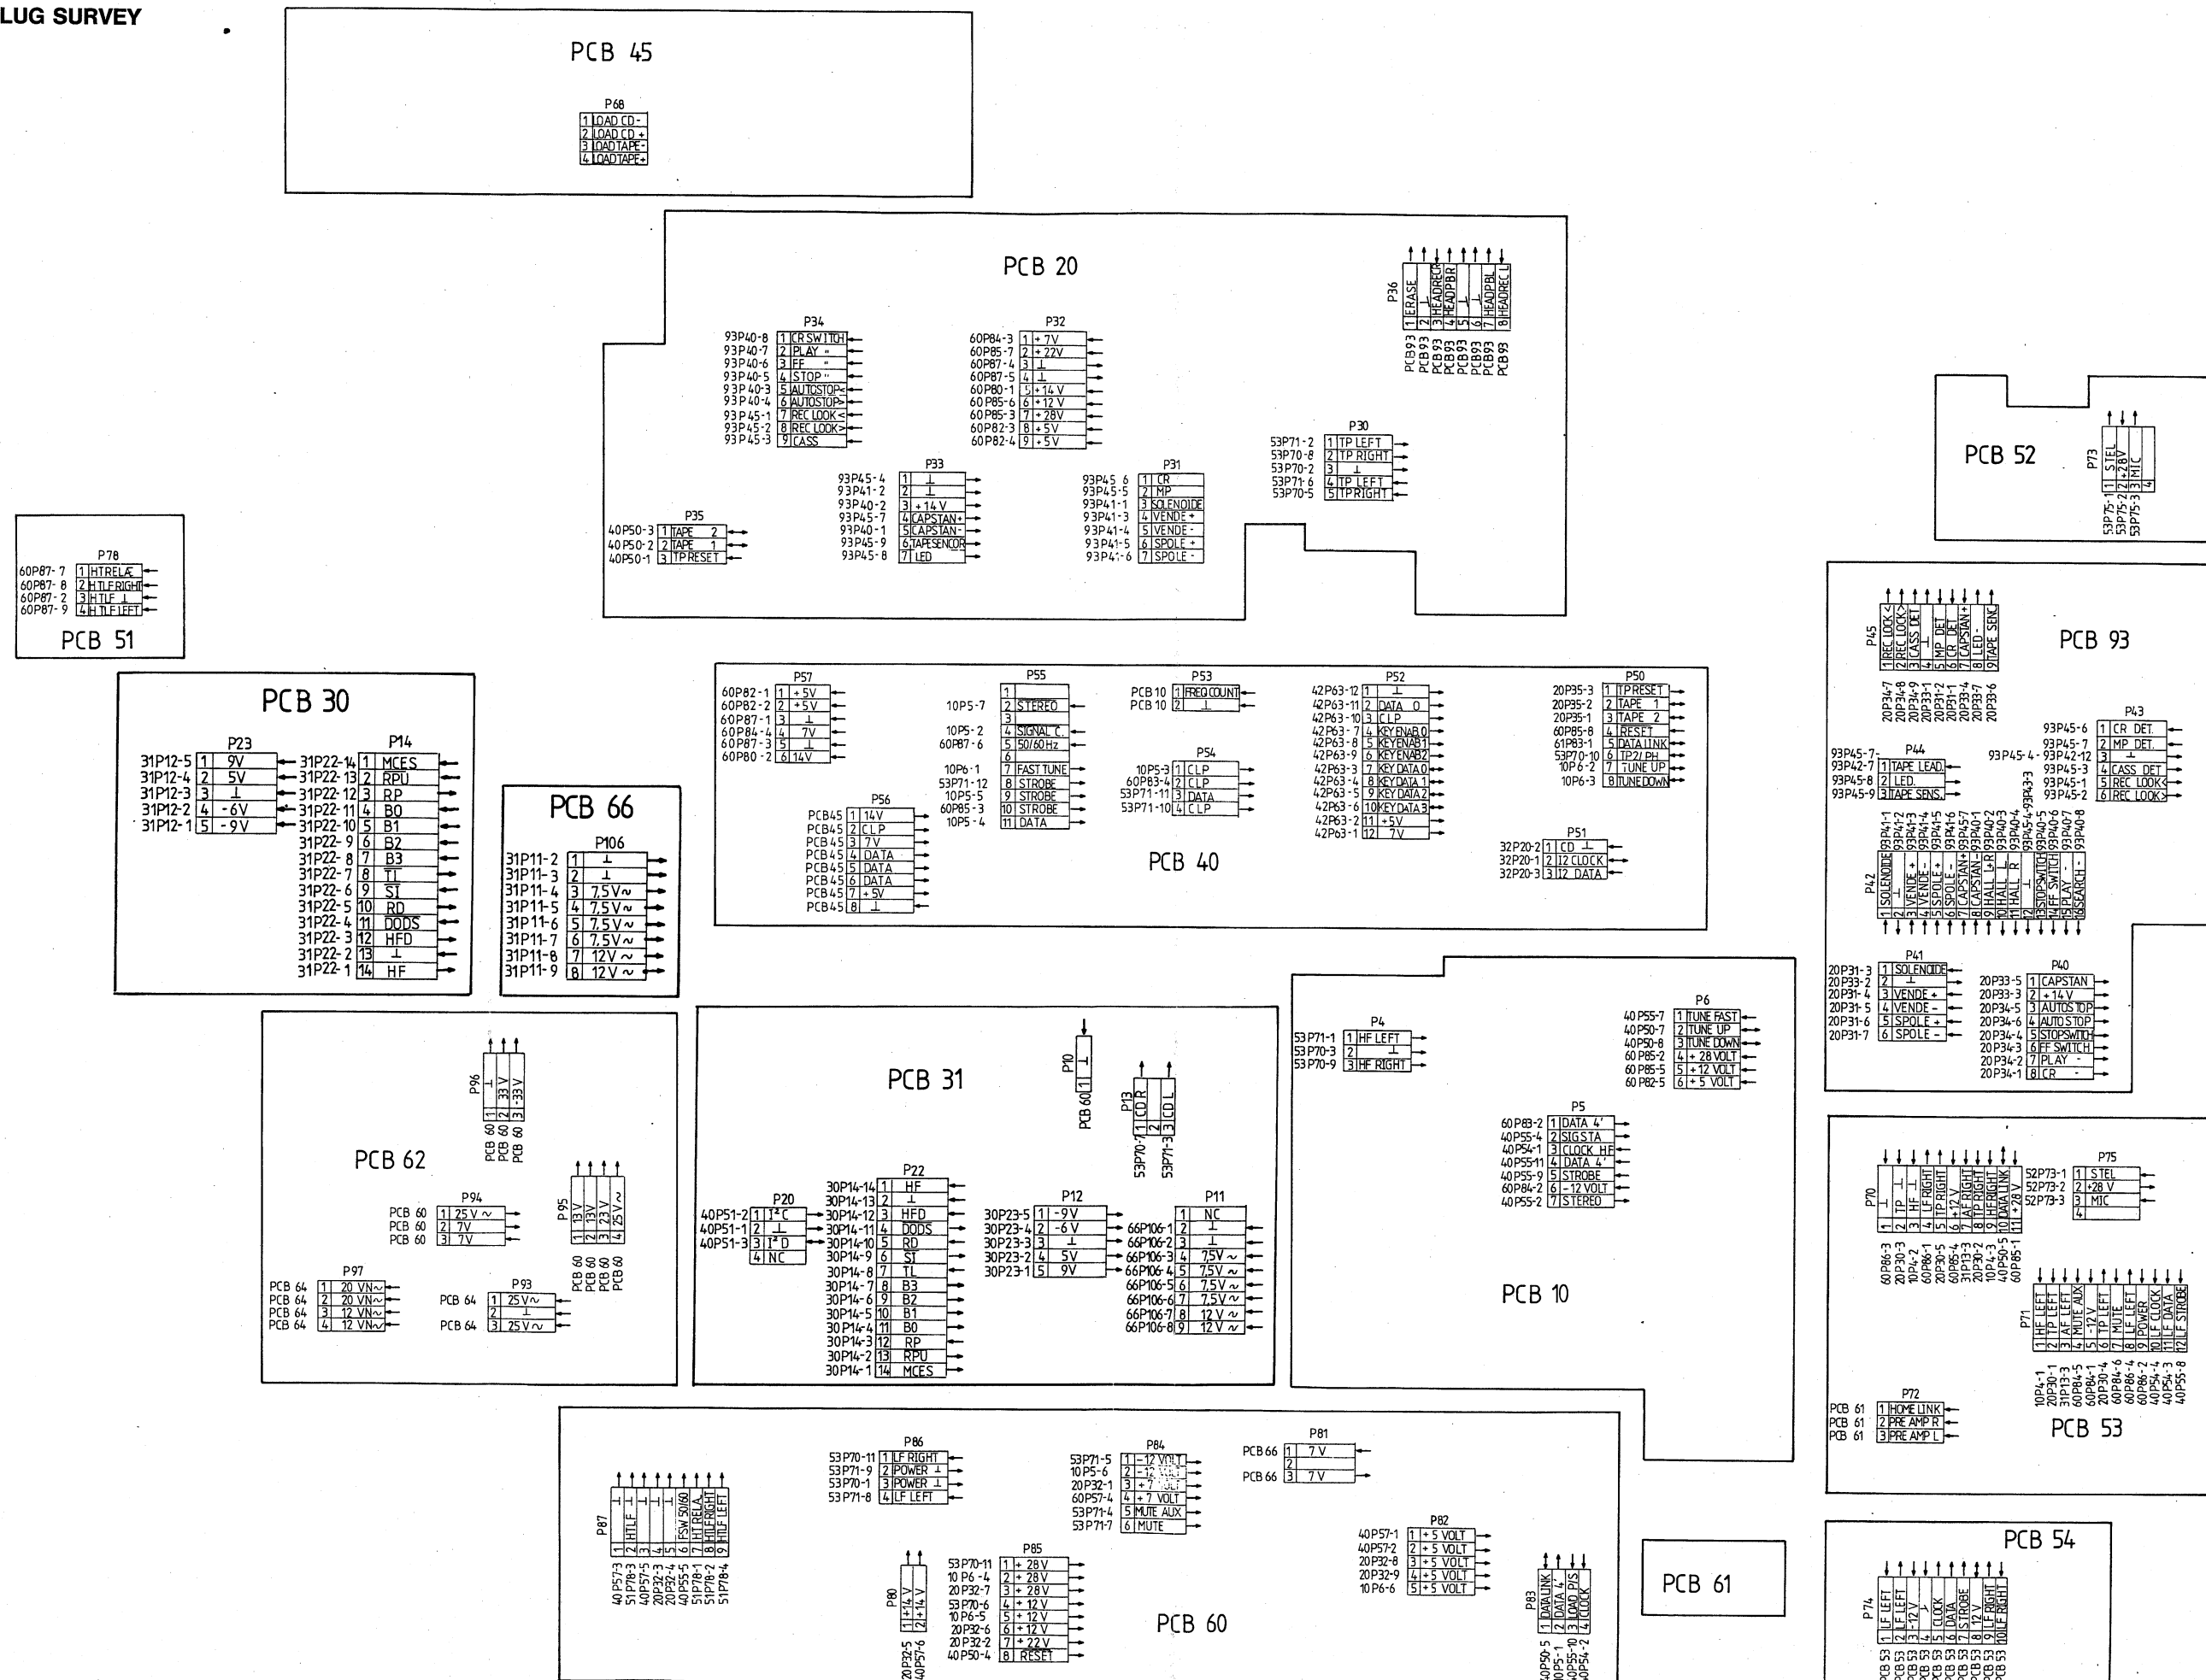

Replace with same type 250 milliamperes 250 volts slow acting fuse.  
Remplacer par un fusible retardé de même type et de 250 milliampères 250 volts.

Replace with same type 400 milliamperes 125 volts slow acting fuse.  
Remplacer par un fusible retardé de même type et de 400 milliampères 125 volts.

The FM TUNER is a single unit.  
With failure in this unit we recommend replacing the whole unit.  
However the part nos. of semi-conductors are in the list of semi-conductors.

When servicing PCB40 avoid removing or short-circuiting the supply voltage from the lithium battery to the static RAM, pos. 40IC6. If this happens the data in the RAM are erased and Beocenter 9500 displays CODE.

Survey of Screws

Smøring

Behovet for eftersmøring er minimalt, men ved større eftersyn og ved udskiftning af vigtige mekaniske dele, bør disse retningslinier følges.

Lubrication

The need for lubrication is negligible, but the directions given below should be followed during overhauls and when replacing major mechanical components.

Vinkel 9359: Aksel for remhjul. Messingtap på tandhjul 9376. Aksel i vendemekanisme 9303. Aksler for spoletallerkener 9319, 9332.	Bracket 9359: Shaft for belt wheel. Brass tap on wheel 9376. Shaft inside reversing mechanism 9303. Shafts for wheels 9319, 9332.	3984022 Floil GB-TS-1

## JUSTERINGER

## HF justeringer

## Udskiftning af FM tuner

Ved udskiftning af FM tuner er det kun nødvendigt at justere MF spolen 17L7.

## MF

Tilslut et oscilloskop til 10IC2 ben 8.  
Tilslut en sweepgenerator til antenneindgangen og indstil den til 87,5 MHz.

Tryk »Radio«.

Tryk »Search«.

Tryk »AM-FM« til displayet viser 87.5.

Tryk »Manual«.

Juster 17L7 til maksimum og symmetrisk MF kurve.

## TUNER JUSTERINGER (KUN HVIS TUNEREN ER MISJUSTERET)

## Oscillator

Der skal ikke tilføres signal.

Tilslut DC voltmeter mellem 17TP11 og ben 8 på tuner.

Tryk »Radio«.

Tryk »Search«.

Tryk »AM-FM« til displayet viser 87.5.

Juster 17L8 til 0V.

## HF 87,5 MHz

Tilslut et oscilloskop til 10IC2 ben 8.

Tilslut en sweepgenerator til antenneindgangen og indstil den til 87,5 MHz.

Tryk »Radio«.

Tryk »Search«.

Tryk »AM-FM« til displayet viser 87.5.

Tryk »Manual«.

Juster 17L2, 17L4, 17L5 og 17L7 til maksimum og symmetrisk MF kurve.

## HF 108 MHz

Tryk »Radio«.

Tryk »Search«.

Tryk »Freq«.

Tryk 1080.

Tryk »Manual«.

Sweepgeneratorens frekvens ændres til 108 MHz.

Juster 17R32, 17R33 og 17R34 til maksimum.

## Detektor

Tilslut oscilloskop til 10IC2 ben 8.

Tilslut DC voltmeter over 10R19 (10TP12 og 10TP13).

Tryk »Radio«.

Tryk »Search«.

Tryk »Am-FM« til displayet viser 87.5.

Tryk »Freq«.

Tryk »940«.

Tryk »Manual«.

## ADJUSTMENTS

## RF Adjustments

## Replacement of FM tuner

When replacing an FM tuner, it is only necessary to adjust the IF coil 17L7.

## IF

Connect an oscilloscope to 10IC2 pin 8.

Connect a sweep generator to the aerial input and adjust it to 87.5 MHz.

Press "Radio".

Press "Search".

Press "AM-FM" until the display shows 87.5.

Press "Manual".

Adjust 17L7 to maximum and symmetrical IF curve.

## TUNER ADJUSTMENT (ONLY IF TUNER IS MALADJUSTED)

## Oscillator

Do not input a signal.

Connect DC voltmeter between 17TP11 and the tuner's pin 8.

Press "Radio".

Press "Search".

Press "AM-FM" until the display shows 87.5.

Adjust 17L8 to 0V.

## RF 87.5 MHz

Connect an oscilloscope to 10IC2 pin 8.

Connect a sweep generator to the aerial input and adjust it to 87.5 MHz.

Press "Radio".

Press "Am-FM" until the display shows 87.5.

Press "Manual".

Adjust 17L2, 17L4, 17L5 and 17L7 to maximum and symmetrical IF curve.

## RF 108 MHz

Press "Radio".

Press "Search".

Press "Freq".

Press 1080.

Press "Manual".

Change sweep generator frequency to 108 MHz.

Adjust 17R32, 17R33 and 17R34 to maximum.

## Detector

Connect oscilloscope to 10IC2 pin 8.

Connect DC voltmeter across 10R19 (10TP12 and 10TP13).

Press "Radio".

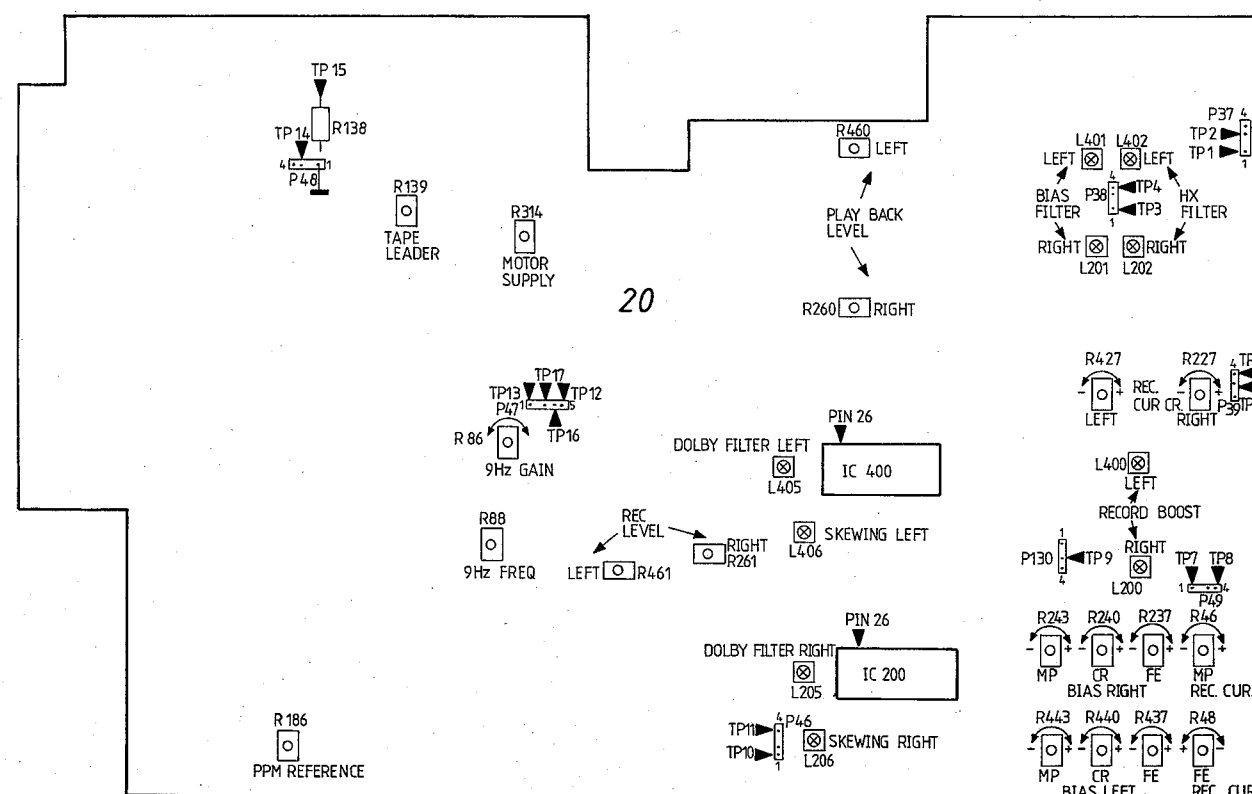

Press "Search".

Press "AM-FM" until the display shows 87.5.

Press "Search".

Press "940".

Press "Manual".

Tilslut en målesender til antenneindgangen og indstil den til 94 MHz.

Finindstil målesenderens frekvens til minimum 2. harmonisk forvrængning af signalet, som vist på kurven.

Connect a signal generator to the aerial input and adjust it to 94MHz.

Fine-tune the signal generator to at least second harmonic distortion of the signal as indicated on the curve.

RIGTIG

FORKERT

Juster 10L2 så tæt mod 0V DC som muligt.  
NB! Spændingen over 10R19 vil hele tiden variere p.g.a. korrektionspulser fra mikrocomputeren.

Efter detektor justering indstil FM DISPLAY INDIKERING se afsnit 7-?.

Adjust 10L2 as close to 0V DC as possible.

NOTE! The voltage across 10R19 will vary continuously because of correction pulses from the micro-computer.

After adjustment of the detector, adjust the FM DISPLAY INDICATION, see section 7-?.

## FM LF output

Tilslut en målesender til antenneindgangen og indstil den til mono, 94MHz, 1mV EMF,  $\Delta \pm 75$  kHz.

Tilslut LF voltmeter til 10TP14 (10TP15).

Tryk »Radio«.

Tryk »Search«.

Tryk »AM-FM« til displayet viser 87,5.

Tryk »Freq«.

Tryk 940.

Juster 10R204 (10R404) til 1V RMS.

(Type 2503 justeres til 700mV RMS).

## FM AF output

Connect a signal generator to the aerial input and adjust it to mono, 94MHz, 1mV EMF,  $\Delta \pm 75$ kHz.

Connect AF voltmeter to 10TP14 (10TP15).

Press "Radio".

Press "Search".

Press "AM-FM" until the display shows 87.5.

Press "Freq".

Press 940.

Adjust 10R204 (10R404) to 1V R.M.S.(Adjust type 2503 to 700mV R.M.S.)

## Kanalseparation

Tilslut en stereokoder (Encoder) til antenneindgangen og indstil den til 94 MHz og umoduleret signal i den ene kanal.

Tilslut LF voltmeter til 10TP14 eller 10TP15 (den umodulerede kanal).

Tryk »Radio«.

Tryk »Search«.

Tryk »AM-FM« til displayet vises 87,5.

Tryk »Freq«.

Tryk 940.

Juster 10R51 til minimum signal i den umodulerede kanal.

Tilslut LF voltmeter til den anden kanal, og indstil stereokoderen til umoduleret signal i den samme kanal.

Kontroller, juster til symmetrisk kanalseparation.

## Channel separation

Connect a stereo encoder to the aerial input and adjust it to 94MHz and unmodulated signal in one channel.

Connect AF voltmeter to 10TP14 or 10TP15 (the unmodulated channel).

Press "Radio".

Press "Search".

Press "AM-FM" until the display shows 87.5.

Press "Freq".

Press 940.

Adjust 10R51 to minimum signal in the unmodulated channel.

Connect AF voltmeter to the other channel, and adjust the stereo encoder to unmodulated signal in the same channel.

Check, adjust to symmetrical channel separation.

## FM stop niveau

Tilslut en målesender til antenneindgangen, og indstil den til 94MHz, 20 $\mu$ V EMF,  $\Delta \pm 75$  kHz.

Tilslut DC voltmeter til kollektor på 10TR5.

Tryk »Radio«.

Tryk »Search«.

Tryk »AM-FM« til displayet visere 87,5.

Tryk Freq«.

Tryk 940.

Drej 10R25 mod uret til stop.

Drej 10R25 med uret til spændingen på kollektoren af 10TR5 skifter fra high til low.

## FM stop level

Connect a signal generator to the aerial input, and adjust it to 94MHz, 20 $\mu$ V EMF,  $\Delta \pm 75$ kHz.

Connect DC voltmeter to the collector at 10TR5.

Press "Radio".

Press "Search".

Press "AM-FM" until the display shows 87.5.

Press "Freq".

Press 940.

Turn 10R25 anticlockwise to stop.

Turn 10R25 clockwise until the collector voltage of 10TR5 switches from high to low.

**AM**

For at undgå indvirkning fra AGC'en, anbefales det at kortslutte 10C62.

**LW oscillator**

Der skal ikke tilføres signal.

Tilslut DC voltmeter til 10TP16.

Tryk »Radio«.

Tryk »Search«.

Tryk »AM-FM« til frekvensdisplayet viser 150.

Juster 10L9 til  $2V \pm 0,25V$ .

Tryk »Freq«.

Tryk 350.

Juster 10C56 til  $25V \pm 0,5V$

Gentag evt. proceduren.

**MW oscillator**

Der skal ikke tilføres signal.

Tilslut DC voltmeter til 10TP16.

Tryk »Radio«.

Tryk »Search«.

Tryk »AM-FM« til frekvensdisplayet viser 150.

Tryk »Freq«.

Tryk 520.

Juster 10L8 til  $2V \pm 0,25V$ .

Tryk »Freq«.

Tryk 1610.

Juster 10C55 til  $25V \pm 0,5V$ .

Gentag evt. proceduren.

**AM MF**

Tilslut en sweepgenerator til antenneindgangen, og indstil den til centerfrekvens 455 kHz  $\Delta 10$  kHz.

Tilslut et oscilloskop til 10IC7 ben 13.

Tryk »Radio«.

Tryk »Search«.

Tryk »AM-FM« til frekvensdisplayet viser 150.

Tryk Freq«.

Tryk 1500.

Kortslut 10R98.

Juster 10L13 og 10L14 til maksimum og symmetrisk MF kurve.

Kortslutningen over 10R98 fjernes.

**ANTENNEKREDSE**

MW antennekredsene skal justeres først.

**MW**

Tilslut en målesender til antenneindgangen, og indstil den til 1500 kHz, 30% modulation.

Tilslut oscilloskop eller LF voltmeter til 10IC7 ben 13.

Tryk »Radio«.

Tryk »Search«.

Tryk »AM-FM« til frekvensdisplayet viser 150.

Tryk »Freq«.

Tryk 1500.

Juster 10C83 til maksimum output.

Målesenderens frekvens ændres til 575 kHz.

Tryk »Freq«.

Tryk 575 kHz.

Juster 10L12 til maksimum output.

Gentag evt. proceduren.

**AM**

In order to avoid any kind of influence from the AGC, it is recommended that 10C62 be short-circuited.

**LW oscillator**

Do not input a signal.

Connect DC voltmeter to 10TP16.

Press "Radio".

"Search".

Press "AM-FM" until the frequency display shows 150.

Adjust 10L9 to  $2V \pm 0.25V$ .

Press "Freq".

Press 350.

Adjust 10C56 to  $25V \pm 0.5V$ .

Repeat this procedure if necessary.

**MW oscillator**

Do not input a signal.

Connect DC voltmeter to 10TP16.

Press "Radio".

Press "Search".

Press "AM-FM" until the frequency display shows 150.

Press "Freq".

Press 520.

Adjust 10L8 to  $2V \pm 0.25V$ .

Press "Freq".

Press 1610.

Adjust 10C55 to  $25V \pm 0.5V$ .

Repeat this procedure if necessary.

**AM IF**

Connect a sweep generator to the aerial input, and adjust it to centre frequency, 455 kHz  $\Delta 10$  kHz.

Connect an oscilloscope to 10IC7 pin 13.

Press "Radio".

Press "Search".

Press "AM-FM" until the frequency display shows 150.

Press "Freq".

Press 1500.

Short-circuit 10R98.

Adjust 10L13 and 10L14 to maximum and symmetrical IF curve.

Remove the short-circuit across 10R98.

**AERIAL CIRCUITS**

The MW aerial circuits must be adjusted first.

**MW**

Connect a signal generator to the aerial input, and adjust it to 1500 kHz, 30% modulation.

Connect oscilloscope or AF voltmeter to 10IC7 pin 13.

Press "Radio".

Press "Search".

Press "AM-FM" until the frequency display shows 150.

Press "Freq".

Press 1500.

Adjust 10C83 to maximum output.

Signal generator frequency is changed to 575 kHz.

Press "Freq".

Press 575 kHz.

Adjust 10L12 to maximum output.

Repeat this procedure if necessary.

## LW

Målesenderens frekvens ændres til 330 kHz.  
Tryk »Freq«.  
Tryk 330.  
Juster 10C81 til maksimum output.  
Målesenderens frekvens ændres til 160 kHz.  
Tryk »Freq«.  
Tryk 160.  
Juster 10L11 til maksimum output.  
Gentag evt. proceduren.

## AM stop niveau

Kortslutninger over 1C62 fjernes.  
Tilslut en målesender til antenneindgangen, og indstil den til 1MHz 30% modulation, og 30  $\mu$ V.  
Tilslut DC voltmeter til kollektor på 10TR5.  
Tryk »Radio«.  
Tryk »Search«.  
Tryk »AM-FM« til frekvensdisplayet viser 150.  
Tryk »Freq«.  
Tryk 1000.  
Juster 10R73 til 2,5 V.

## Lysintensitet

For at undgå forringelse af display drivernes levetid, må nedennævnte spændingsværdier ikke overskrides ved justering af lysintensitet.

## PCB42

Tilslut en modstand på 390 ohm fra ben 20 til ben 31 på 42IC3, og tilslut DC voltmeter over modstanden.  
Korslut testmode stikket på PCB43 kortvarigt. 42R39 justeres til der måles 2,8V.

## PCB44

Tilslut en modstand på 390 ohm fra ben 20 til ben 2 på 44IC1, og tilslut DC voltmeter over modstanden.  
Kortslut testmode stikket på PCB43 kortvarigt, og tryk derefter »Play«, (øverste venstre display skal lyse).  
44R1 justeres til der måles 2,8V.

## PCB45

Tilslut en modstand på 390 ohm fra ben 20 til ben 5 på 45IC1, og tilslut DC voltmeter over modstanden.  
Kortslut testmode stikket på PCB43 kortvarigt, og tryk derefter »Record« i det midterste touchfelt, (midterste display sektion foroven skal lyse).  
45R1 justeres til der måles 2,8V.

## PCB46

Tilslut en modstand på 100 ohm fra ben 20 til ben 18 på 46IC1, og tilslut DC voltmeter over modstanden.  
Kortslut testmode stikket på PCB43 kortvarigt, og tryk derefter »Call« (øverste højre display skal lyse).  
Juster 45R2 til der måles 0,7V.

## LW

The signal generator frequency is changed to 330 kHz.  
Press "Freq".  
Press 330.  
Adjust 10C81 to maximum output.  
Change the signal generator frequency to 160 kHz.  
Press "Freq".  
Press 160.  
Adjust 10L11 to maximum output.  
Repeat this procedure if necessary.

## AM stop level

Remove the short-circuit across 1C62.  
Connect a signal generator to the aerial input, and adjust it to 1MHz 30% modulation, and 30  $\mu$ V.  
Connect DC voltmeter to the collector at 10TR5.  
Press "Radio".  
Press "Search".  
Press "AM-FM" until the frequency display shows 150.  
Press "Freq".  
Press 1000.  
Adjust 10R73 to 2.5V.

## Light intensity

In order to avoid reduction of display drive life, the voltage values given below must not be exceeded when adjusting the light intensity.

## PCB42

Connect a 390 ohm resistor from pin 20 to pin 31 of 42IC3 and connect a DC voltmeter across the resistor.  
Short-circuit the test mode plug of PCB43 briefly.  
Adjust 42R39 until a value of 2.8 V is measured.

## PCB44

Connect a 390 ohm resistor from pin 20 to pin 2 of 44IC1 and connect a DC voltmeter across the resistor.  
Short-circuit the test mode plug of PCB43 briefly, and then press "Play" (top left-hand display must light up).  
Adjust 44R1 until a value of 2.8 V is measured.

## PCB45

Connect a 390 ohm resistor from pin 20 to pin 2 of 45IC1 and connect a DC voltmeter across the resistor.  
Short-circuit the test mode plug of PCB43 briefly, and then press "Record" in the middle touch-field (middle display section at the top must light up).  
Adjust 45R1 until a value of 2.8 V is measured.

## PCB46

Connect a 100 ohm resistor from pin 20 to pin 18 of 46IC1 and connect a DC voltmeter across the resistor.  
Short-circuit the test mode plug of PCB43 briefly, and then press "Call" (top right-hand display must light up).  
Adjust 45R2 until a value of 0.7 V is measured.

**MEKANISKE JUSTERINGER BÅNDOPTAGER****Højde og azimuth**

For at opnå korrekt højdejustering skal højdeværktøj bestillingsnr. 3624026 benyttes.

En tilnærmet justering kan opnås med en spejlkasette.

**MECHANICAL ADJUSTMENTS TAPE RECORDER****Height and azimuth**

To obtain correct height adjustment, height adjustment tool part no. 3624026 must be used.

Approximate adjustment can be obtained using a mirror cassette.

**Højde båndstyr**

Ilæg justerværktøj 1 og 2.

Tryk »Tape 1«.

NB! På grund af virkningen fra autostoppet kører tonehovedbroen ud umiddelbart efter at den er kørt ind.

Skub værktøj 1 ind i båndstyrene.

Juster henholdsvis A og D sådan at højden passer med overkanten af værktøjet.

**Height, tape guide**

Insert adjustment tools 1 and 2.

Press "Tape 1".

NB! Due to the effect from the auto stop the tape head base travels out immediately after it has travelled in.

Push tool 1 into the tape guides.

Adjust A and D respectively so that the height is level with the top edge of the tool.

**Azimuth side 1**

Ilæg azimuth bånd bestillingsnr. 6780036.

De to Y indgange på et oscilloskop tilsluttes højre og venstre AUX udgang.

Tryk »Tape 1«, og skruen E justeres til de 2 kurver på oscilloskopet er i medfase ved max. amplitude.

**Azimuth side 1**

Load azimuth tape part no. 6780036.

Connect the two Y inputs on an oscilloscope to right and left AUX outputs.

Press "Tape 1" and adjust screw E until the 2 curves on the oscilloscope are in phase at maximum amplitude.

**Azimuth side 2**

Tryk »Turn«.

Justeringen gøres som azimuth side 1, blot justeres der med skruen F.

**Azimuth side 2**

Press "Turn".

Adjustment as for side 1 but using screw F.

**Højde side 1**

Tryk »Tape 1« (»Side 1« skal lyse, tryk evt. »Turn«). Værktøj 1 skubbes ind i båndstyret på tonehovedet.

**Height side 1**

Press "Tape 1" ("Side 1" must be lit, press if necessary "Turn"). Push tool 1 into the tape guide on the tape head.

Det øverste båndstyr skal passe med overkanten af værktøj 1.

The top tape guide must be level with the top edge of tool 1.

Højden ændres ved at lægge 0,1 mm afstandsskiver (bestillingsnr. 2624052) under tonehovedopspændingen ved skruen C.

The height can be changed by placing 0.1 mm spacing washers (part no. 2624052) under the tape head mount at screw C.

## Højde side 2

Tryk »Tape 1« (»Side 2« skal lyse, tryk evt. »Turn«).

Justeringen gøres som højde side 1, evt. skiver skal lægges ind ved skruen B.

Der skal altid være samme antal skiver i begge sider.

Hvis højden justeres, skal azimuth kontrolleres.

## Height, side 2

Press "Tape 1" ("Side 2" must be lit, press if necessary "Turn").

Adjustment as for height, side one; washers, if any should be inserted at screw B.

There must always be the same number of washers in both sides.

If the height is adjusted, the azimuth must be checked.

## Frigang trykruller

## Thrust roller clearance

Ved at bukke fligen G, justeres henholdsvis højre og venstre trykrulle, til en frigang fra kapstan akslen på 0,5 mm ved spoling.

By bending pin G, the right and left thrust rollers can be adjusted separately for a clearance to the capstan shaft of 0.5 mm during fast forward and rewind.

## ELEKTRISKE JUSTERINGER BÅNDOPTAGER

Henvisningerne er for højre kanal, (henvisningerne i parentes er for venstre kanal).

Justeringerne foretages uden DOLBY NR, hvis andet ikke er nævnt.

Ilæg en kasette for optagelse.

Tryk »Aux«, »Record«, »Programming« og »Dolby« indtil Dolby indikatoren slukker.

Ved justeringer, hvor der skal benyttes tonegenerator, tilsluttes denne AUX indgangen.

Norm bånd benyttet til justering:

6780066 CrO<sub>2</sub> TDK AP 512  
6780067 Fe<sub>2</sub>O<sub>3</sub> BASF R723 DG  
6780101 METAL TDK AP 712

## ELECTRICAL ADJUSTMENTS TAPE RECORDER

References are for the right channel, (references in brackets are for the left channel).

Adjustments to be made without DOLBY NR. unless otherwise stated.

Load cassette for recording.

Press "Aux", "Record", "Programming" and "Dolby" until the Dolby indicator turns off.

For adjustments requiring an tone generator, this must be connected to the AUX input.

Level tapes used for adjustment:

6780066 CrO<sub>2</sub> TDK AP 512  
6780067 Fe<sub>2</sub>O<sub>3</sub> BASF R723 DG  
6780101 METAL TDK AP 712

## Hastighed

## Speed

Ilæg wow bånd bestillingsnr. 6780037. (Justeringen skal foretages midt på båndet).

Tilslut wow meter med driftmeter til AUX stikket.

Tryk »Tape 1«, måleresultatet aflæses og noteres.

Tryk »Turn«, og den anden side af båndet afspilles, måleresultatet aflæses og noteres.

Middelværdien af de to tal udregnes.

Hvis måleresultaterne er negative, lægges middelværdien til det højeste af de to tal, og skruen B i motoren justeres til det udregnede resultat.

Hvis måleresultaterne er positive, trækkes middelværdien fra det højeste af de to tal, og skruen B i motoren justeres til det udregnede resultat.

### Gengiveniveau

Justering af gengiveniveau er her beskrevet efter to norm bånd.

1: DIN standard, 250 pWb mm.

2: Dolby level, 200 pWb mm.

1: Pegel bånd bestillingsnr. 6780035 ilægges.

LF voltmeter tilsluttes 20TP10 (20TP11).

Tryk »Tape 1«.

20R260 (20R460) justeres til der måles 440 mV.

2: Dolby level calibration bånd MTT-150A ilægges.

LF voltmeter tilsluttes 20TP10 (20TP11).

Tryk »Tape 1«.

20R260 (20R460) justeres til der måles 387 mV.

### Optage niveau og PPM reference

Ilæg en kassette for optagelse.

Tryk »Aux«.

Tryk »Record« en gang. (Record pause uden signal tilført).

Tryk »Programming« og derefter »Level« indtil Level indikatoren blinker en gang, og Auto indikatoren slukker.

Tilslut tonegenerator til AUX indgangen og indstil den til 333 Hz og 400 mV.

LF voltmeter tilsluttes 20TP10 (20TP11).

20R261 (20R461) justeres til der måles 440 mV.

20R185 justeres til lysdioden for 0 dB netop lyser.

Tryk "Stop".

Load wow tape part no. 6780037. (The adjustment should be made in a mid-tape position).

Connect wow meter with drift meter to the AUX socket.

Press "Tape 1", read off and note down reading.

Press "Turn" and play other side of tape, read off and note down reading.

Calculate the mean of the two figures.

If the values obtained are negative, add the mean value to the higher of the two figures and adjust screw B in the motor to the value calculated.

If the values obtained are positive, subtract the mean value from the higher of the two figures and adjust screw B in the motor to the value calculated.

### Playback level

Adjustment of playback level is described here in accordance with two level tapes.

1: DIN standard, 250 pWb mm.

2: Dolby level, 200 pWb mm.

1: Load standard level tape part no. 6780035.

Connect AF voltmeter to 20TP10 (20TP11).

Press "Tape 1".

Adjust 20R260 (20R460) until a reading of 440 mV is obtained.

2: Load Dolby level calibration tape MTT-150A.

Connect AF voltmeter to 20TP10 (20TP11).

Press "Tape 1".

Adjust 20R260 (20R460) until a reading of 387 mV is obtained.

### Rec level and PPM reference

Load cassette for recording.

Press "Aux".

Press "Record" once. (Record pause without signal supplied).

Press "Programming" and then "Level" until the level indicator flash once, and the Auto indicator switches off.

Connect tone generator to the AUX input and set it to 333 Hz and 400 mV.

Connect AF voltmeter to 20TP10 (20TP11).

Adjust 20R261 (20R461) until a reading of 440 mV is obtained.

Adjust 20R185 until the LED for 0 dB starts to light up.

Press "Stop".

## Optagehæv

Tonegenerator indstilles til 333 Hz og 30 mV.

Cr bånd ilægges.

LF voltmeter tilsluttes 20TP7 (20TP8).

Tryk »Record« en gang (Record pause).

Tryk »Programming« og derefter »Level« indtil Level indikatoren blinker en gang, og Auto indikatoren slukker.

Tonegeneratorens output reguleres til der måles 1 V.

Tonegeneratorens output dæmpes 20 dB og frekvensen ændres til 19 kHz.

20L200 (20L400) justeres til der måles 600 mV.

Tryk »Stop«.

## HX Filter

Ilæg kassette for optagelse.

DC voltmeter tilsluttes 20TP3 (20TP4).

Tryk »Record« en gang. (Record pause uden signal tilført).

20L202 (20L402) justeres til minimum DC spænding.

Tryk »Stop«.

## Bias filter

LF voltmeter tilsluttes 20TP6 (20TP5).

Ilæg kassette for optagelse.

Tryk »Record« REC en gang. (Record pause uden signal tilført).

20L201 (20L401) justeres til minimum spænding.

Tryk »Stop«.

## Skewing

Tonegenerator indstilles til 1 kHz og 30 mV.

Ilæg kassette for optagelse.

LF voltmeter tilsluttes 20TP18 (20TP19).

Tryk »Programming« og tryk »Dolby« til DOLBY C lyser og tryk »Record« en gang. (Record pause).

Tonegeneratorens niveau finreguleres til LF voltmeteret viser »0 dB«.

Tonegeneratorens frekvens ændres til 17 kHz.

20L206 (20L406) justeres til niveauet er faldet 8,5 dB.

Tryk »Stop«.

## Dolby filter

Kortslut 20TP6 (20TP5) til 20IC200 (20IC400) ben 26 via en 1nF kondensator.

Ilæg en Metal bånd kassette.

## Recording boost

Set tone generator to 333 Hz and 30 mV.

Load Cr tape.

Connect AF voltmeter to 20TP7 (20TP8).

Press "Record" once (Record pause).

Press "Programming" and the "Level" until the Level indicator flash once, and the Auto indicator switches off.

Adjust tone generator's output until a reading of 1 V is obtained.

Damp the tone generator's output by 20dB and change the frequency to 19 kHz.

Adjust 20L200 (20L400) until a reading of 600 mV is obtained.

Press "Stop".

## HX Filter

Connect DC voltmeter to 20TP3 (20TP4).

Load cassette for recording.

Press "Record" once. (Record pause without signal supplied).

Adjust 20L202 (20L402) to minimum DC voltage.

Press "Stop".

## Bias filter

Connect AF voltmeter to 20TP6 (20TP5).

Load cassette for recording.

Press "Record" REC once. (Record pause without signal supplied).

Adjust 20L201 (20L401) to minimum voltage.

Press "Stop".

## Skewing

Set tone generator to 1 kHz and 30 mV.

Load cassette for recording.

Connect AF voltmeter to 20TP18 (20TP19).

Press "Programming" and press "Dolby" until DOLBY C lights up and press "Record" once. (Record pause).

Fine adjust the tone generator's level until the AF voltmeter indicates "0 dB".

Change the tone generator's frequency to 17 kHz.

Adjust 20L206 (20L406) until the level has fallen by 8.5 dB.

Press "Stop".

## Dolby filter

Short-circuit 20TP6 (20TP5) to 20IC200 (20IC400) pin 26 via a 1nF capacitor.

Load an Metal tape cassette.

LF voltmeter tilsluttes 20TP10 (20TP11).

Tryk »Record« REC en gang. (Record pause uden signal tilført).

20L205 (20L405) justeres til minimum spænding.

Tryk »Stop«.

#### Cr bias

CrO<sub>2</sub> norm bånd bestillingsnr. 6780066 ilægges.

Tonegenerator indstilles til 333 Hz og ca. 30 mV.

LF voltmeter tilsluttes 20TP10 (20TP11).

For optagelse:

Tryk »Record« en gang. (Record pause uden signal tilført).

Tryk »Programming« og derefter »Level« indtil level indikatoren blinker en gang, og Auto indikatoren slukker.

Herefter tilsluttes tonegeneratoren.

Ved henholdsvis at optage (tryk »Record« to gange) og gengive 333 Hz og 15 kHz, justeres 20R240 (20R440) indtil niveauet ved 15 kHz og 333 Hz er ens.

(Mindre bias giver diskant hævet. Mere bias giver diskant fald).

#### Fe bias

Gøres som Cr bias, blot skal Fe<sub>2</sub>O<sub>3</sub> norm bånd bestillingsnr. 6780067 benyttes, og der justeres med 20R237 (20R437).

#### MP bias

Gøres som Cr bias, blot skal Metal norm bånd bestillingsnr. 6780101 benyttes, og der justeres med 20R243 (20R443).

#### Optagestrøm Cr

CrO<sub>2</sub> norm bånd bestillingsnr. 6780066 ilægges.

Tonegenerator indstilles til 333 Hz og 200 mV.

LF voltmeter tilsluttes 20TP10 (20TP11).

Ved henholdsvis at optage (tryk »Record« to gange) og gengive 333 Hz, justeres 20R227 (20R427) indtil der måles samme spænding under såvel optage som gengive.

#### Optagestrøm Fe

Gøres som optagestrøm Cr, blot skal Fe<sub>2</sub>O<sub>3</sub> norm bånd bestillingsnr. 6780067 benyttes.

Justeringen er fælles for højre og venstre kanal og foretages med 20R48.

#### Optagestrøm MP

Gøres som optagestrøm Cr, blot skal Metal norm bånd bestillingsnr. 6780101 benyttes.

Connect AF voltmeter to 20TP10 (20TP11).

Press "Record" once. (Record pause without signal supplied).

Adjust 20L205 (20L405) to minimum voltage.

Press "Stop".

#### Cr bias

Load CrO<sub>2</sub> level tape part no. 6780066.

Set tone generator to 333 Hz and approx. 30 mV.

Connect AF voltmeter to 20TP10 (20TP11).

For optagelse:

Press "Record" once. (Record pause without signal supplied).

Press "Programming" and then "Level" until the level indicator flash once, and the Auto indicator switches off.

Now connect tone generator.

While recording (press "Record" twice) and playing back 333 Hz and 15 kHz respectively, adjust 20R240 (20R440) until the level is the same for 15 kHz and 333 Hz.

(Less bias will result in treble boost. More bias will result in treble cut.)

#### Fe bias

As for Cr bias, but Fe<sub>2</sub>O<sub>3</sub> level tape part no. 6780067 must be used and the adjustment is made with 20R237 (20R437).

#### MP bias

As for Cr bias, but Metal level tape part no. 6780101 must be used and the adjustment made with 20R243 (20R443).

#### Recording current Cr

Load CrO<sub>2</sub> level tape part no. 6780066.

Set tone generator to 333 Hz and 200 mV.

Connect AF voltmeter to 20TP10 (20TP11).

While recording (press "Record" twice) and playing back 333 Hz, adjust 20R227 (20R427) until the same voltage is measured during both recording and playback.

#### Recording current Fe

As for recording current Cr, but Fe<sub>2</sub>O<sub>3</sub> level tape part no. 6780067 must be used.

Adjustment is for right and left channel together and is made using 20R48.

#### Recording current MP

As for recording current Cr, but Metal level tape part no. 6780101 must be used.

Justeringen er fælles for højre og venstre kanal og foretages med 20R46.

## Dolby koder

*9 Hz Freq.*

Kortslut 20TP14 til stel.

Kortslut 20TP9 til 20TP12.

Et dobbelt strålet oscilloskop stilles i X-Y og begge stråler i DC.

Den ene stråle tilsluttes 20TP13, og den anden stråle tilsluttes 20TP16.

Oscilloskopets stelledning tilsluttes 20TP17 6V REF.

**NB! Jordledningen i oscilloskopets netledning må ikke være tilsluttet jord ved denne justering.**

Ilæg kassette for optagelse.

Tryk »Record« 2 gange (uden signal tilført).

20R88 justeres til Lissajous figuren viser en cirkel.

Kortslutningen 20TP9 til 20TP12 fjernes.

*9 Hz Ampl.*

Kortslut 20P14 til stel.

Cr bånd ilægges.

LF voltmeter tilsluttes 20TP13.

Der optages et stykke på båndet, uden signal tilført (tryk »Record« to gange).

Optagelsen gengives, og 20R86 justeres til der måles 2V RMS.

**HUSK** at fjerne kortslutningen i 20P14.

## Opsamlemoment (Motor supply)

Ilæg moment måle kassette.

Tryk »Tape 1«

Det aflæste opsamlemoment vil svinge mellem to værdier, og 20R314 justeres til middelværdien er 45 pcm.

## Føler for udløbsstop (Tape leader)

Ilæg en ikke gennemsigtig kassette uden bånd.

Der må ikke tilføres lys udefra (fra f.eks. en arbejds-lampe).

DC voltmeter tilsluttes 20TP15.

Tryk tonehovedbroen ind med hånden.

20R139 justeres til  $9V \pm 0,3 V$ .

Adjustment is for right and left channels together and must be made using 20R46.

## Dolby codes

*9 Hz Freq.*

Short-circuit 20TP14 to ground.

Short-circuit 20TP9 to 20TP12.

Set double-beam oscilloscope to X-Y and both beams in DC.

Connect one beam to 20TP13 and the other to 20TP16.

Connect the ground wire of the oscilloscope to 20TP17 6V REF.

**NB! During this adjustment the earth wire in the mains cable of the oscilloscope must not be connected to earth.**

Load cassette for recording.

Press "Record" twice (without signal supplied).

Adjust 20R88 until Lissajous figure on the oscilloscope shows a circle.

Remove short circuit 20TP9 to 20TP12.

Adjust 1R52 until Lissajous' figure on the oscilloscope shows a circle.

*9 Hz Ampl.*

Short-circuit 20TP14 to ground.

Load Cr tape.

Connect AF voltmeter to 20TP13.

Record for a while on the tape without a signal being supplied (press "Record" twice).

Playback recording and adjust 20R86 until 2 V RMS is measured.

**DO NOT FORGET** to remove the short circuit in 20TP14.

## Take-up torque (Motor supply)

Load torque measurement cassette.

Press "Tape 1".

The take-up torque reading will oscillate between two values and 20R314 must be adjusted until the mean value is 45 pcm.

## Sensor for tape leader

Load a non-transparent cassette without tape.

Light must not be supplied from the outside (from, for example, a work lamp).

Connect DC voltmeter to 20TP15.

Press in the tape head base with the hand.

Adjust 20R139 to  $9V \pm 0,3 V$ .

## MEKANISKE JUSTERINGER CD

## Kontrol af vinkel indstilling på laserarm

Vinkel indstillingen kan kontrolleres efter glasplademethoden, som er forklaret i det efterfølgende.

## MECHANICAL ADJUSTMENTS CD

## Checking the angle setting

The angle setting can be checked with the glass-disc method which is explained below.

Læg glasplade (bestillingsnr. 3634030) på pladeholderen. Glaspladen skal hvile jævnt mod pladeholderen.

Put glass disc part no. 3634030 on the turntable. Make sure that the glass disc beds down well on the turntable.

Placer CD løbeværket under en lyskilde hvorunder der er en lige linie (f.eks. et lysstofrør med gitter).

Place the CD mechanism under a light source, under which there is a straight line (e.g. under a fluorescent tube with grid).

Placer laserarmen midt i dens radiale vandring.

Set the arm to mid-position of its radial track.

Drej løbeværket indtil laserarmen er parallel med linien fra lyskilden.

Turn the mechanism until the arm is parallel to the line under the light source (see figure below).

Se i forlængelse af den reflekterede linie på henholdsvis glasplade og optik. Der må ikke være mere end 4 mm afstand mellem de 2 linier.

Look into the direction and in the extension of the line to the reflection there of on the glass disc and in the objective. These lines should not be apart more than 4 mm.

Placer CD løbeværket sådan at linien der reflekteres af optikket løber gennem optikkets centrum.

Place the CD mechanism so that the reflected line runs across the centre of the objective.

Hvis linien der reflekteres af glaspladen er indenfor optikkets overfalde, er vinkel indstillingen i orden.

When the line that is reflected by the glass disc stays within the surface of the objective, the angle setting is correct.

Drej CD løbeværket 90° i forhold til forrige position.

Turn the CD mechanism through 90° relative to the previous position.

Hold laserarmen i midterposition.

The arm must be kept in mid-position (see figure above).

Gentag ovenstående kontrol.

Repeat the previous check.

### Justering af vinkel indstilling

Hvis kontrol af vinkel indstilling viser, at vinklen er udenfor tolerance, skal den *ikke* justeres til minimum afvigelse men blot indenfor tolerance.

### Adjusting the angle setting

If a check on the angle setting shows that the angle falls outside the tolerance, the angle should *not* be adjusted for minimum deviation, but it should be adjusted within the tolerance.

Efter justering af vinkel indstilling, (se næste side), skal laserarmens friktion kontrolleres. Dette kan gøres med en trykfjedermåler, som holdes mod magneten på focusenheden.

After adjusting the setting, the friction of the arm must be checked. This is done by means of a spring pressure gauge which is held against the magnet of the focusing unit.

Friktionen skal være under 25 mN gennem enhedens hele vandring.

The friction of the arm, measured over the entire meter reading, should not be greater than 25 mN.

Hvis friktionen er for høj skal RAFOC enheden udskiftes og vinkel indstillingen skal kontrolleres igen.

When the friction appears to be too high, the CD mechanism must be replaced and the angle setting shall be checked once more.

Justering af vinkel indstilling gøres som beskrevet i det efterfølgende:

Adjustment of the angle setting is performed as follows:

Skruerne C løsnes indtil armlejet D kan forskubbes. Vinkelindstillingen justeres ved at skubbe armlejet D som vist på nedenstående tegning.

Loosen screws C (see figure above) until bearing plate D can be displaced. Correct the angle setting by moving the bearing plate into the direction shown in figure below.

Skruerne C spændes medens det sikres at indstillingen ikke flytter sig.

Tighten screws C, ensuring that the setting does not drift.

Foretag kontrol af vinkelindstilling.

Then double check the setting in two directions.

## DISC MOTOR CONTROL PCB96

## ELEKTRISKE JUSTERINGER CD

## Kontrol af laserforsyning

Laseren, laserforsyningen i 30IC6101 og monitor-dioden danner et tilbagekoblings-system. En fejl i laserforsyningen kan medføre, at laseren ødelægges.

Da det er umuligt at kontrollere og reparere et tilbagekoblingssystem, hvor en af komponenterne mangler, kan nedenstående kredsløb bruges til at kontrollere laserforsyningen.

Den grønne LED udgør laseren. Spændingen over 18 ohms modstanden udgør monitor-tilbagekoblings-spændingen. 33 ohms modstanden og omskifteren gør det muligt at ændre strømforbruget fra laserforsyningen.

Grøn LED f.eks. CQY94 bestillingsnr. 8330054.

Fleks-printet tages ud af P31 på servo-PCB'en.

Ovenstående kredsløb loddet på P31 på servo-PCB'en.

SI (ben 20 på 30IC6101) kortsluttes til stel.

Når  $\overline{SI}$  (Start initialization) er low, kan laserforsyningen tændes i service position 1, ved at kortslutte TESTMODE stikket på PCB43 kortvarigt. Tryk derefter CD, hvis låg går op så tryk LOAD CD. Tryk derefter 1.

LO-spændingen på ben 9 af 30P31 måles.

S1 afbrudt:

LO fra 1,8 V til 2,3 V

LM fra 170 mV til 220 mV

Den grønne LED lyser svagt

S1 kortsluttet:

LO fra 1,8 V til 2,3 V

LM fra 170 mV til 220 mV

Den grønne LED lyser svagt.

Når S1 skiftes fra kortsluttet til afbrudt, vil LED'en lyse kraftigere i et kort øjeblik. Tilbagekoblingssystemet bevirker, at der går samme strøm i LED'en, hvad enten S1 er kortsluttet eller afbrudt.

## ELECTRICAL ADJUSTMENTS CD

## Checking the laser supply

The laser, the laser supply in 30IC6101 and the monitor diode form a feed-back system. A defect in the laser supply may result in destruction of the laser.

As it is impossible to check and repair a feed-back system if one part of the system is missing, the laser supply can be checked by means of the below circuit.

The green LED replaces the laser. The voltage across the 18-ohm resistor is the feed-back voltage for the monitor. The 33-ohm resistor and the switch make it possible to change the power consumption from the laser supply.

Green LED, e.g. CQY94, part no. 8330054.

Remove the flex PCB from P31 on the servo PCB.

Connect the above-mentioned circuit to P31 on the servo PCB.

Connect SI (pin 20 of 30IC6101) to ground.

When  $\overline{SI}$  (Start initialization) low, the laser supply can be switched on by short circuit the socket TESTMODE on PCB43 briefly. Then press CD, if CD lid opens press LOAD CD. Then press 1.

Measure the LO voltage on pin 9 of 30P31.

S1 open:

LO from 1.8 V to 2.3 V

LM from 170 mV to 220 mV

The green LED emits little light

S1 closed:

LO from 1.8 V to 2.3 V

LM from 170 mV to 220 mV The green LED emits little light.

During the change from S1 closed to S1 open, the LED will shortly emit more light than usual. The feed-back system ensures that the same amount of current passes through the LED irrespective of whether S1 is open or closed.

## Laserstrøm

### *Vigtigt:*

Efter udskiftning af CD løbeværket eller servo-PCB30 skal laserstrøm-potentiometeret 30R3106 forjusteres, inden apparatet tilsluttes lysnettet.

Tilslut et ohmmeter over 30R3105 + 30R3106. Juster 30R3106, indtil 30R3105 og 30R3106 tilsammen har en værdi på 1 kohm.

Tilslut et DC-voltmeter over 30R3102.

Tilslut et oscilloskop til ben 27 på 30IC6101.

Ilæg testplade nr. 5 (plade uden fejl, bestillingsnr. 3634031) og tryk CD.

Kontroller på oscilloskopet, om der er HF signal. Hvis der ikke er HF signal, slukkes apparatet, og fejlen findes.

Hvis der er HF signal, spilles spor 1 på testplade 5, og 30R3106 justeres, til der måles  $50\text{mV} \pm 5\text{mV}$  med DC-voltmeteret.

### **Fokus offset.**

Ilæg testplade nr. 5A (bestillingsnr. 3634031).

Sæt apparatet i service-position 2 ved at kortslutte TEST MODE stikket på PCB43 kortvarigt.

Tryk CD (hvis CD låget går op, så tryk Load CD). Derefter er du tilbage i TEST MODE.

Tryk derefter 1 og 2.

Hvis displayet bliver ved med at vise -2, justeres 30R3146 til displayet viser 02.

Sæt apparatet i serviceposition 4 ved at trykke 3 og 4 (04 i displayet skal lyse, og pladen skal rotere).

Tilslut et DC-voltmeter over 30C2136.

Juster 30R3146 til der måles  $400\text{mV} \pm 40\text{mV}$ .

## Laser current

### *Important:*

When replacing the CD mechanism or the servo PCB30, the laser current potentiometer 30R3106 must be preadjusted before the set is connected to mains.

Connect an ohmmeter across 30R3105 + 30R3106. Adjust 30R3106 until the combined value of 30R3105 and 30R3106 is 1 kohm.

Connect a DC voltmeter across 30R3102.

Connect an oscilloscope to pin 27 of 30IC6101.

Load test disc no. 5 (disc without faults, part no. 3634031) and press CD.

Check on the oscilloscope whether there is any HF signal. If not, switch off the CD player and locate the fault.

If there is an HF signal, play track 1 of test disc 5 and adjust 30R3106 until a reading of  $50\text{mV} \pm 5\text{mV}$  is obtained on the DC voltmeter.

### **Focus offset**

Load test disc 5A (part no. 3634031)

Set the unit in service position 2 by short-circuiting the TEST MODE point on PCB43 briefly.

Press CD (if the CD lid opens, press Load CD). Now the device is back to TEST MODE.

Then press 1 and 2.

If -2 is displayed, adjust 30R3146 until the display shows 02.

Set the unit in service position 4 by pressing 3 and 4 (04 on the display must light and the disc rotate).

Connect a DC voltmeter across 30R2136.

Adjust 30R3146 until a reading of  $400\text{mV} \pm 40\text{mV}$ .

## Kontrol af disc-motor systemet

1. Afbryd Vc-forbindelsen ved at fralodde 30D6110 og 30D6111.
2. Sæt apparatet i serviceposition 1 ved at kortslutte TESTMODE stikket på PCB 43 kortvarigt. Tryk derefter CD, hvis CD låg går op så tryk LOAD CD. Tryk derefter 1.
3. Tilslut negativ DC spændingsforsyning (V-in) til Vc ben 1 på 30P36. NB! Apparatet *skal* stå i service position 1 (strømforsyningen i apparatet skal være tændt) når dette gøres.
4. Mål med et oscilloskop, først over 96R3094, og derefter over 96R3093 på disc motor control PCB'en. De 2 stråler på et dobbelt strålet oscilloskop *må ikke* tilsluttes over de 2 modstande samtidig, da forsyningsspændingerne ellers kortsluttes. Spændingsforsyningen reguleres, indtil der ses 3 pulser med oscilloskopet på 100 mS. (se tegning).

## Checking the disc motor system

1. Disconnect the Vc connection by desoldering 30D6110 and 30D6111.
2. Put the player in service position 1, by short circuit the socket TEST MODE on PCB 43 briefly. Then press CD, if CD lid opens press LOAD CD. Then press 1.
3. Inject a *negative* voltage (V-in) to the VC connection (Pin 1 on 30P36). This voltage *may only* be injected *after* the player is put in service position 1. (The power supply in the player must be ON).
4. Measure with an oscilloscope first across 96R3094 and hereafter across 96R3093 on the disc motor PCB. Do not measure across both resistors at the same time, as this will cause short circuit of the power supplies. Now adjust the injected voltage in such a way that 3 complete pulses are visible during 100 mS. (See figure).

5. DC-spændingsforsyningen reguleres til  $-1.7 \text{ V} \pm 0.5$  V på P36-1 på servo-PCB'en.

Reference-spænding over 96R3094 = 56,4 mVpp.  
 Reference-spænding over 96R3093 = 58,8 mVpp.  
 Hvis forskellen på de 2 spændinger er større end 6 mV, når spændingerne er lavere end reference-værdierne, er motoren defekt.

6.

5. Adjust the injected voltage until  $-1.7 \pm 0.5 \text{ V}$  are present on pin 1 of P36 on the servo PCB.

Reference voltage across 96R3094 = 56.4 mVpp.  
 Reference voltage across 96R3093 = 58.8 mVpp.  
 If the difference between the 2 voltage exceeds 6 mVpp, while the voltage are below the reference values, the motor is defect.

6.

Toppen må højest variere 24 mV i amplitude.  
 Flanken må højest variere 35 mV i amplituden.

Top difference must not exceed 24 mVpp amplitude.  
 Flank difference must not exceed 36 mVpp amplitude.

7. Eksempler på pulsformer som er udtryk for fejl i disc-motor systemet:

7. Examples of wave forms when the disc motor system is faulty.

8. DC-spændingsforsyningen reguleres til 1,5 V på P36-1 på servo PCB'en.  
Motoren skal stadig køre.  
Pulsens amplitude falder, men pulsformen skal stadig være symmetrisk og afrundet.

8. Adjust the injected voltage until -1.5 V are present on pin 1 of P36 on the servo PCB.  
The motor should keep on running.  
The amplitude of the pulse will be lower, but the wave form must be symmetrical and rounded.

## Kontrol af fokus-motor

## Checking the focus motor

### Fokus-spænding

### Focus voltage

Tilslut et DC-voltmeter fra ben 13 af 30P31 til stel.

Connect a DC voltmeter from pin 13 of 30P31 to ground.

Ilæg testplade nr. 5 (plade uden fejl, bestillingsnr. 3634031) og spil spor 1.  
Den målte spænding skal ligge inden for området -1,2 til +1,2 V.

Load a test disc no. 5 (disc without faults, part no. 3634031) and play track 1. The voltage measured should be within the range from -1.2 V to +1.2 V.

### Konklusion:

Hvis ovennævnte punkter kan opfyldes, er disc motor systemet i orden.

### Conclusion:

When all above mentioned conditions are fulfilled it may be assumed that the disc motor system is all right.

## ADSKILLELSE

General serviceposition

## DISMANTLING

General Servicing Position

Skruerne A (3 stk) i apparatets forkant fjernes

Remove 3 screws (A) at front of set.

Skrue B fjernes og kølegitter skubbes mod højre og aftages.  
Skruerne C fjernes (5 stk).

Remove screw B and push heat dissipation grille to left to dislodge.  
Remove 5 screws (C).

Topchassis sættes i serviceposition ved hjælp af armen D, der er placeret i topchassiset.

CD låget skal være lukket.

Place top chassis in servicing position using arm D located in top chassis.

The CD lid must be closed.

## Serviceposition for PCB20

## Servicing Position for PCB20

De 2 skruer E fjernes, PCB20 kan anbringes i serviceposition som vist.

Remove 2 screws (E); PCB20 can be placed in servicing position as shown.

## Serviceposition for PCB60

## Servicing Position for PCB60

Skrue F aftages og kølepladens plastdæksel fjernes ved at trække opad.

Take out screw (F) and remove plastic cover of heat dissipation panel by pulling upwards.

Skrue G aftages og plastdæksel over transformator fjernes.

Take out screws (G) and remove plastic cover over transformer.

**N.B.** Pas på nettransformatorens terminaler med netspænding.

**N.B.** Be careful of mains voltage on terminals of network transformer.

Skrue H aftages og køleplade trækkes lidt op og lægges på bordet med PCB60 opad.

Remove screws (H), pulling heat dissipation panel up slightly and placing it on worktop with PCB60 facing upwards.

## Serviceposition CD

## Servicing Position CD

De to skruer aftages, vinkel med ophæng fjernes, og CD kan trækkes ud og sættes på højkant.

Remove 2 screws (M) and angle with suspension. CD can then be pulled out and set on its edge.

## Serviceposition PCB62

## Servicing Position for PCB62

De to skruer J aftages og modulet skubbes mod højre og løftes op.

Remove 2 screws (J), push module to right and lift.

Serviceposition for Display og Keyboard PCB  
(Udskiftning af glaspaneler)

Servicing Position for PCB Display and Keyboard  
(Replacement of glass panels)

Skrue K fjernes og Display glasset skubbes mod ventre og aftages.

Skrue L fjernes og Keyboard glasset skubbes mod ventre og aftages.

PCB er nu tilgængelig for service.

Remove screw (K) and push display glass to left to dislodge.

Remove screw (L) and push keyboard glass to left to dislodge.

PCB is now assessible for servicing.

Serviceposition for PCB53 og 54

Servicing Position for PCB53 and 54

Skruerne I (4 stk) aftages og modulet tages op og sættes på højkant.

Remove 4 screws (I), lift up module and place it on its edge.

## REPARATIONSTIPS

## REPAIR TIPS

### Reparation i tuningssystemet

Ved reparation i tuningssystemet kan det være vanskeligt at lokalisere en fejl. Følgende servicetips kan benyttes til at »åbne sløjfen« mellem mikrocomputeren og resten af tunings-systemet.

#### 1. Neddeler af oscillatorfrekvens:

Kortslut kollektor og emitter på 10TR5. Ben 9 på tunerens suges fri for tin, så der ikke er forbindelse til loddeøen.

Tilslut en målesender til basis på 10TR3 via en 1nF kondensator.

Indstil målesenderen til FM, og en frekvens på f.eks. 100,7 MHz, output større end 15mV.

Tryk »Radio«.

Tryk »Search«.

Tryk »AM-FM« til frekvensdisplayet viser 87,5.

Tryk >>>.

Frekvensdisplayet skal nu vise en frekvens, der er 10,7MHz under målesenderens frekvens, i dette tilfælde 90MHz.

Frekvensdeleren deler med 400.

Kortslutningen fjernes.

### Repairs in the tuning system.

When carrying out tuning system repairs, it may be difficult to localize a fault. The following service tips may be used for "opening the loop" between the microcomputer and the rest of the tuning system.

#### 1. Oscillator frequency divider:

Short-circuit collector and emitter at 10TR5. Remove all solder from tuner pin 9 so that there is no connection to the soldering point.

Connect a signal generator to the base of 10TR3 via a 1nF capacitor.

Set the signal generator to FM and a frequency of, for example, 100.7MHz, the output being greater than 15mV.

Press "Radio".

Press "Search".

Press "AM-FM" until the frequency display shows 87.5.

Press >>>.

The frequency display will now show a frequency which is 10.7MHz less than the frequency of the signal generator, i.e., 90MHz in this example.

The frequency divider divides by 400.

Remove the short-circuit.

**2. Korrektion af afstemningsspænding:**

Ben 9 på tuneren suges fri for tin, så der ikke er forbindelse til loddeøen.  
 Tilslut en målesender til basis på 10TR3 via en 1nF kondensator.  
 Indstil målesenderen til FM, 100,7MHz, output større end 15mV.  
 Tilslut et oscilloskop til 10IC9 ben 5 og ben 6.  
 Tilslut et DC voltmeter til kollektoren på 10TR12.  
 Tryk »Radio«.  
 Tryk »Search«.  
 Tryk »AM-FM« til frekvensdisplayet viser 87,5.  
 Tryk »Freq«.  
 Tryk 900.  
 Tryk »Manual«.  
 Målesenderens frekvens reguleres langsomt op. Dette opfattes som oscillator drift mod højere frekvens af mikrocomputeren, som så skal sende positive korrektionspulser til 10IC9 ben 5.  
 Reguleres der ned for målesenderens frekvens, i forhold til 100,7 MHz, skal mikrocomputeren sende positive korrektionspulser til 10IC9 ben 6.  
 Opregulering af frekvensen skal give faldende spænding på DC voltmeteret.  
 Nedregulering af frekvensen skal give stigende spænding på DC voltmeteret.

**3. FM oscillator og HF:**

10R82 løftes (den side af 10R82 som vender mod 10TR12 loddet fra).  
 En variabel DC strømforsyning tilsluttes med + til den fraloddede side af 10R82, og indstilles til 0V.  
 Tilslut en målsender til FM antenneindgangen.  
 Indstil senderen til 88MHz.  
 Tryk »Radio«.  
 Tryk »Search«.  
 Tryk »AM-FM« til frekvensdisplayet viser 87,5.  
 Tryk »Freq«.  
 Tryk 880.  
 Tryk »Manual«.  
 DC strømforsyningen skrues langsomt op, og når modtageren »fanger« 88MHz skal spændingen være ca. 4V.  
 Målesenderens frekvens ændres til 107 MHz.  
 Strømforsyningen skrues op, og når modtageren »fanger« frekvensen skal spændingen være ca. 19V.

**4. AM oscillator og HF:**

10R82 løftes (den side af 10R82 som vender mod 10TR12 loddet fra).  
 En variabel DC strømforsyning tilsluttes med + til den fraloddede side af 10R82, og indstilles til 0V.  
 Tilslut en målesender til AM antenneindgangen.  
 Indstil senderen til 150kHz.  
 Tryk »Radio«.

**2. Correction of tuning voltage:**

Remove all solder from tuner pin 9 so that there is no connection to the soldering point.  
 Connect a signal generator to the base of 10TR3 via a 1nF capacitor.  
 Set the signal generator to FM, 100.7MHz, output greater than 15mV.  
 Connect an oscilloscope to 10IC9 pins 5 and 6.  
 Connect a DC voltmeter to the collector of 10TR12.  
 Press "Radio".  
 Press "Search".  
 Press "AM-FM" until the frequency display shows 87.5.  
 Press "Freq".  
 Press 900.  
 Press "Manual".  
 Increase the signal generator frequency slowly. The microcomputer understands this as oscillator drift towards higher frequency, and it therefore has to send positive correction pulses to 10IC9 pin 5.  
 If the signal generator frequency is decreased compared to 100.7MHz, the microcomputer has to send positive correction pulses to 10IC9 pin 6.  
 A frequency increase should result in decreasing voltage on the DC voltmeter.  
 A frequency decrease should result in increasing voltage on the DC voltmeter.

**3. FM oscillator and RF:**

Lift 10R82 (desolder the side of 10R82 facing 10TR12).  
 Connect a variable DC power supply with + at the desoldered side of 10R82, and adjust to 0V.  
 Connect a signal generator to the FM aerial input.  
 Set the generator to 88MHz.  
 Press "Radio".  
 Press "Search".  
 Press "AM-FM" until the frequency display shows 87.5.  
 Press "Freq".  
 Press 880.  
 Press "Manual".  
 Turn up the DC power supply slowly, and when the receiver "catches" 88MHz the voltage should be approx. 4V.  
 The signal generator frequency is changed to 107MHz.  
 Turn up the power supply, and when the receiver "catches" the frequency the voltage should be approx. 19V.

**4. AM oscillator and RF:**

Lift 10R82 (desolder the side of 10R82 facing 10TR12).  
 Connect a variable DC power supply with + at the desoldered side of 10R82, and adjust to 0V.  
 Connect a signal generator to the AM aerial input.  
 Set the generator to 150 kHz.  
 Press "Radio".

Tryk »AM-FM« til frekvensdisplayet viser 150.  
DC strømforsyningen skrues langsomt op, og når  
modtageren »fanger« 150 kHz skal spændingen være  
ca. 2V.

Målesenderens frekvens ændres til 350 kHz.  
Strømforsyningen skrues op, og når modtageren  
»fanger« frekvensen skal spændingen være  
ca. 25V.

Samme procedure kan benyttes i mellembølgeom-  
rådet:

520 kHz spænding ca. 2V.

1610 kHz spænding ca. 25V.

Press "AM-FM" until the frequency display shows 150.  
Turn up the DC power supply slowly, and when the  
receiver "catches" 150 kHz the voltage should be  
approx. 2V.

The signal generator frequency is changed to 350 kHz.  
Turn up the power supply, and when the receiver  
"catches" the frequency the voltage should be approx.  
25V.

The same procedure may be followed in the medium  
wave range:

520 kHz voltage approx. 2V.

11610 kHz voltage approx. 25V.

## Manuel åbning eller lukning af låg.

## Manual Opening or Closing of Cover

Låg over CD og TAPE kan åbnes og lukkes manuelt.  
Det kan være nyttigt, hvis lågfunktionen er blokeret  
eller apparatet ikke er tilsluttet lysnettet.  
Gennem de viste huller, kan man dreje lågakslerne  
med en skruetrækker, og dermed åbne og lukke  
lågerne.

The cover over CD and TAPE can be opened and  
closed manually. This may be useful if the cover  
function is blocked or the set is not connected to the  
mains.

The cover axles can be rotated with a screwdriver  
through the holes shown, thereby opening and closing  
the covers.

## Udskiftning af låg over CD og TAPE

## Replacement of Cover and CD and TAPE

Apparatet sættes i serviceposition.

Låget åbnes og plastdækslet under låget tages ud (4 stk. plastclips (TAPE), eller 4 stk. skruer (CD)).

Låget lukkes ca. 80% (kan gøres ved at dreje med lågaksel).

De to glidestyr ved pilene A løftes ud af styrespor.

Låget trækkes mod venstre.

Låget løftes fri af låsene B og kan nu tages af.

Place the set in the servicing position. Open the cover and take out the plastic lid under the cover (4 plastic clips (TAPE), or 4 screws (CD)).

Close the lid approx. 80% (this can be done by rotating the cover axle).

Lift the two sliding controls at arrows A out of the control track. Pull the cover to the left.

Raise the cover clear of locks (B) and then remove.

*(Højdejustering af midterplade 9116)*

## Højdejustering af midterpladen

- Fjern glaspanelerne (se side 6-6).
- Juster højden på midterpladen vha. de fire skrue Z, indtil kanten flugter med låg for CD og TAPE

*(Height adjustment of centre panel 9116)*

## Height adjustment of centre panel

- Remove glass panels (see page 6-6).
- Adjust height of centre panel by adjusting the four screws Z until the edge is flush with the CD and TAPE lid.

*(Höheneinstellung der Mittelplatte 9116)*

## Höheneinstellung der Mittelplatte

- Die Glasplatten entfernen (siehe Seite 6-6).
- Die Höhe der Mittelplatte mit Hilfe der vier Schrauben Z einstellen, bis der Rand mit dem CD-und TAPE-Deckel bündig ist.

*(Réglage en hauteur de la plaque centrale 9116)*

## Réglage de la plaque centrale

- Retirer les plaques de verre (voir page (6-6)
- Régler la hauteur de la plaque centrale à l'aide des quatre vis Z, jusqu'à ce que son bord affleure avec les couvercles CD et TAPE.

*(Justering af clammersystem 25XX)*

## Justering af CD-holder

- Sæt topchassiset i serviceposition (se side 6-2).
- Afmonter clamber-dækslet P.
- Før armen Q tilbage, og derefter clamber-armen R.
- Læg CD i. Slip armene.
- Tast /CD/
- Centrér clamber-armen R med eksentrikken N.

## Højdejustering af clamber-arm

- Sæt CD-afspilleren i serviceposition (se side 6-5).
- Løft CD-afspilleren op i hånden og hold den vandret.
- Før armen Q tilbage.
- Tryk CD-holderen ned på lejet for holder.
- Juster CD-holderens højde med skruen O til 0,3 mm +/- 0,2 mm over navet for CD.

*(Adjustment of clamp system 25XX)*

## Adjustment of CD clamp

- Set top panel in service position (see page 6-2).
- Remove clamp cover P.
- Withdraw arm Q and then clamp arm R.
- Insert CD. Release the arms.
- Press /CD/
- Centre clamp arm R using eccentric screw N.

## Height adjustment of clamp arm

- Set CD player in service position (see page 6-5).
- Lift CD player and hold it horizontal.
- Withdraw arm Q.
- Press CD clamp onto the clamp bearing.
- Adjust height of CD clamp using screw O to 0.3 mm +/- 0.2 mm above the CD hub.

*(Einstellung der Klemmvorrichtung 25XX)*

## Einstellung der CD-Halterung

- Das obere Chassis in Wartungsstellung bringen (siehe Seite 6-2)
- Den Deckel P der Klemmvorrichtung ausbauen.
- Den Arm Q und anschließend den Klemmarm R zurückversetzen.
- CD-Platte einlegen. Die Arme loslassen.
- /CD/ drücken.
- Den Klemmarm R mit dem Exzenter N mittig einstellen.

## Höheneinstellung des Klemmarms

- Den CD-Plattenspieler in Wartungsstellung bringen (siehe Seite 6-5).
- Den CD-Plattenspieler mit der Hand hochheben und waagrecht halten.
- Den Arm Q zurückversetzen.
- Die CD-Halterung auf das Lager der Halterung drücken.
- Die Höhe der CD-Halterung mit der Schraube O auf 0,3 mm +/- 0,2 mm über der CD-Nabe einstellen.

*(Réglage du dispositif de blocage 25XX)*

## Réglage du support CD

- Amener le châssis supérieur en position de maintenance (voir page 6-2).
- Démonter le couvercle P du dispositif de blocage.
- Amener sur l'arrière le bras Q, puis le bras R du dispositif de blocage.
- Mettre un disque compact en place. Lâcher les bras.
- Centrer le bras R du dispositif de blocage avec l'excentrique N.

## Réglage en hauteur du bras du dispositif de blocage

- Placer le lecteur de disque compact en position de maintenance (voir page 6-5).
- Dégager avec la main le lecteur CD en le tenant horizontalement.
- Amener sur l'arrière le bras Q.
- Engager le support CD sur le repos du support.
- Régler la hauteur du support CD avec la vis O à 0,3 mm +/- 0,2 mm au-dessus du moyeu du CD.

## Snoretræk

## Cord drive

Snoretrækket for hvert låg består af 2 snorer à ca. 50 cm.

- Klem låsene B fast i låget (se 7-4).
- Bind en knude for enden af snoren.  
Læg derefter knuden i rillen på låsen.  
Træk snoren som vist på tegningen.
- Den fjederbelastede arm skal være parallel med chassiset.  
Fjederne skal sidde i det midterste af de 3 huller.

The cord drive for each cover consists of 2 cords each of approx. 50 cm.

- Fix the locks B tightly in the cover (see 7-4).
- Tie a knot before the end of the cord.  
Then place the knot in the groove on the lock.  
Pull the cord as shown in the drawing.
- The spring-loaded arm must be parallel to the chassis.  
The springs must be in the middle one of the 3 holes.

### Kalkpletter på aluminiumsoverflader

Eventuelle kalkpletter på aluminiumsoverfladerne som følge af indtørrede vanddråber kan fjernes med et kalkopløsningsmiddel, f.eks. 30% eddikesyre.

### Lime stains on aluminium surfaces

Lime stains on the aluminium surfaces, caused by dried water drops, can be removed by a lime dissolving solution, e.g. 30% acetic acid.

**Testfunktioner**

Beocenter 8500/9500 kan bringes i forskellige »test-modes« ved tage det underste displayglas af, og korts-lutte stikket TESTMODE på PCB 43 i få sekunder.

Der er mulighed for:

Kontrol af lysdioder.  
Test af ROM/I2C RAM.  
Test af RAM.  
Kommunikationstest.  
Test af IR-modtager.  
Sletning af RAM.  
FM-displayindikering.  
AM-displayindikering.  
Serviceprogram CD.

Resultatet af hver test indikeres i displayet, i form af en kode. Hvis koden har form som et spørgsmålstegn, så start testen på ny.

**Test Functions**

The Beocenter 8500/9500 can be put into different test modes by removing the bottom display glass and short-circuiting the TEST MODE plug on PCB 43 for a few seconds.

There are facilities for:

Check LEDs.  
ROM/I2C RAM test.  
RAM test.  
Communication test.  
IR receiver test.  
RAM deletion.  
FM display indication.  
AM display indication.  
Servicing Program CD.

The result of each test is indicated in the display in the form of a code. If the code takes the form of a question mark, restart the test.

**Lysdiodekontrol:****LED Check**

Kortslut Indikering:	<b>TESTMODE</b> Alle lysdioder i underste panel lyser.
Short-circuit Indication:	<b>TESTMODE</b> All LEDs in bottom panel light up.
Tast Indikering:	<b>PLAY</b> Lysdioder i øverste venstre panel lyser.
Key Indication:	<b>PLAY</b> LEDs in top left panel light up.
Tast Indikering:	<b>RECORD</b> Lysdioder i øverste midterste panel lyser.
Key Indication:	<b>RECORD</b> LEDs in top middle panel light up.

Tast Indikering:		<b>CALL</b> Lysdioder i øverste højre panel og display lyser.
Key Indication:		<b>CALL</b> LEDs in top right panel and display light up.
Tast		<b>STAND BY</b>
Key		
ROM (40IC3) I2C/RAM (40IC4) – test: ROM (40IC3) I2C/RAM (40IC4) – test: Kortslut		<b>TESTMODE</b>
Short-circuit		<b>TESTMODE</b>
Tast		<b>5</b>
Key		
Display	0.0 ROM/RAM i orden	E. 1, 2 eller 3 Fejl i ROM. Fejl i RAM.
Display	0.0 ROM/RAM okay	E. 1, 2 or 3 Error in ROM/RAM.
Tast		<b>STAND BY</b>
Key		

## RAM-test intern/extern 40IC1, 40IC4, 40IC6:

Ram testes under hver opstart af 25xx fra stand by. Hvis testen findes i orden, kører opstarten i.fl.g. det valgte program.

## RAM Test internal/external 40IC1, 40IC4, 40IC6:

RAM is tested each time 25xx is started up from stand-by. If the test is okayed, start-up proceeds according to the program selected.

Hvis der findes fejl i intern RAM (40IC1, 40IC4):

Går 25xx i TESTMODE og display viser .01.

If an error is located in internal RAM (40IC1, 40IC4):

25xx goes into TEST MODE and display shows .01.

i extern RAM (40IC6):

Går 25xx i TESTMODE og display viser .02.

in external RAM (40IC6):

25xx goes into TEST MODE and display shows .02.

i både intern og extern RAM  
(40IC1, 40IC4, 40IC6):

Går 25xx i TESTMODE og display viser .03.

in both internal and external RAM  
(40IC1, 40IC4, 40IC6):

25xx goes into TEST MODE and display shows .03.

Hvis yderligere kontrol af mikroprocessoren er nødvendig kan følgende gøres:

If further checking of the microprocessor is required, the following can be carried out:

40P50, P51, P52, P54, P55, P56, P57, 10P2 og IR-øje afmonteres, og PCB 40 tages ud af Beocenteren. Tilslut en strømforsyning med +5V (500 mA) til ben 1 på 40P57 og stel på afskærmningsrammen. Mikroprocessoren resettes ved kortvarigt at kortslutte 40P50 ben 4 til stel. Kontroller, at der er et AC-signal tilstede på 40IC1 ben 5. Hvis ikke resettes Beocenteren igen.

Dismount 40P50, P51, P52, P54, P55, P56, P57, 10P2 and the IR eye, and remove PCB40 from the Beocenter. Connect a +5 V (500 mA) power supply to pin 1 of 40P57 and to the screen frame chassis. Reset the microprocessor by briefly short-circuiting 40P50 pin 4 to chassis. Make sure that there is an AC signal on 40IC1 pin 5. If not, reset the Beocenter again.

PCB 40 skal nu vise følgende spændinger:

PCB 40 should now have the following voltage values:

40IC1	DC	AC
Pin 1-2	-	Fig. 1
Pin 4	-	Fig. 2
Pin 5-8	-	Fig. 3
Pin 9	<0.8V	-
Pin 10	ca. 5V	-
Pin 11-12	-	Fig. 4
Pin 13-14	ca. 0V	-
Pin 15	ca. 5V	-
Pin 16-17	-	Fig. 5
Pin 18-19	-	Fig. 6
Pin 20	0V	-
Pin 21-28	-	Fig. 7
Pin 29-30	-	Fig. 8
Pin 31	0V	-
Pin 32-39	-	Fig. 9
Pin 40	+5V	-

40IC4	DC	AC
Pin 1	ca. 5V	-
Pin 2	ca. 0V	-
Pin 3-4	0V	-
Pin 5	ca. 0V	-
Pin 7	-	Fig. 7
Pin 9-10	-	Fig. 5
Pin 11	-	Fig. 8
Pin 12-19	-	Fig. 10
Pin 20	0V	-
Pin 21-22	-	Fig. 11
Pin 23	-	Fig. 14
Pin 24-25	-	Fig. 11
Pin 26-27	ca. 0V	-
Pin 28	-	Fig. 11
Pin 29-31	-	Fig. 12
Pin 32	-	Fig. 13
Pin 33-35	ca. 0V	-
Pin 36-39	ca. 5V	-
Pin 40	+5V	-

40IC6	DC	AC
Pin 1-3	ca. 0V	-
Pin 4	0V	-
Pin 5-6	-	Fig. 4
Pin 7	ca. 0V	-
Pin 8	4.5V	-

Kortslut 40P50 ben 4 til stel og samtidig skal følgende kunne måles:

Short-circuit 40P50 pin 4 to chassis, and at the same time it should be possible to measure the following values:

40IC6	DC	AC
Pin 1-3	ca. 4.5V	-
Pin 4	0V	-
Pin 5-6	ca. 5V	-
Pin 7	ca. 4.5V	-
Pin 8	4.5V	-

Fjern kortslutningen og monter PCB 40 i Beocenteren igen.

Remove the short-circuit and remount PCB40 in the Beocenter.

## Kommunikationstest:

Her testes mikroprocessorens kommunikation fra processorindgange til display. Testen udføres i STAND BY.

## Communication test:

In this test the communication of the microprocessor from processor inputs to display is checked. Carry out the test in STAND BY mode.

TEST MODE

Ved at forbinde følgende ben, en efter en, til +5V gennem en 220 ohms modstand, skal følgende muligheder kunne aflæses på displayet, når der taster

LEVEL:

By connecting the following pins, one by one, to +5 V through a 220 ohm resistor, the following alternative values should be given by the display when the

LEVEL key is pressed:

		Display Indication
40IC1	Pin 1-4	- F' 0C or - F' 0d
	Pin 5	no shift
	Pin 6-8	- F' 0C or - F' 0d
40IC4	Pin 1	- F' 0C or - F' 0d
	Pin 2	- F' 1C or - F' 1d
	Pin 5	- F' 2C or - F' 2d
	Pin 38	- F' 0E or - F' 0-
	Pin 39	- F' 0C or - F' 0d
	Pin 37	Units goes into Stand by

Kortslut TESTMODE

Short-circuit TEST MODE

Ved at forbinde de samme ben en efter en til stel, kan følgende indikeringer aflæses, når der taster LEVEL:

By connecting the same pins, one by one, to chassis, the following indications will be displayed when the LEVEL key is pressed:

40IC1	Pin 1	F 0C or FE 0d
	Pin 2	F8 0C or F9 0d
	Pin 3	- F' 0C or - F' 0d
	Pin 4	- F' 0C or - F' 0d
	Pin 5-8	no shift
40IC1	Pin 1	- F' 04 or - F' 05
	Pin 2	- F' 0C or - F' 0d
	Pin 5	- F' 0C or - F' 0d
	Pin 38	- F' 0C or - F' 0d
	Pin 39	- F' 08 or - F' 09
	Pin 37	Units goes into Stand by

**Test af IR-modtager:**

Hertil bruges en Beolink terminal.

Tast

og hold den nedtrykket.

På 40IC1 ben 3 skal der kunne måles et AC-signal, med en bredde på ca. 2msek. og en amplitude på  $5V_{pp}$ .

Over 40C41 (A2) skal der kunne måles  $\leq 0,2V$  DC når terminalen er placeret meget tæt på modtageren. Uden ☐ knap nedtrykket skal spændingen være  $\geq 0,3V$  DC.

**IR receiver test:**

Use an Beolink terminal for this test.

Key

Press and keep depressed.

On 40IC1 pin 3 it should now be possible to measure an AC signal with a width of approx. 2 msec. and an amplitude of  $5V_{pp}$ .

When the terminal is positioned very close to the receiver, it should be possible to measure a voltage  $\leq 0.2V$  DC across 40C41 (A2).

If the button is not depressed, this voltage should be  $\geq 0.3V$  DC.

## Serviceprogram for CD delen:

Kortslut TEST MODE.

Ilæg CD-plade, f.eks. nr. 5, (plade uden fejl, bestillingsnr. 3634031).

## Servicing program for the CD-section:

Short-circuit TEST MODE.

Insert Compact Disc, ex. no. 5 (disc without faults, part no. 3634031).

Tast <b>CD</b>	CD starter op.	Hvis CD låg går op, så tast Load CD. Derefter er du tilbage i TEST MODE.
Key <b>CD</b>	CD starts up.	If CD lid rises enter Load CD. This takes you back into TEST MODE.
Tast <b>1</b>	Display viser 1. CD stopper, og er klar til test.	
Key <b>1</b>	Display shows 1. CD stops, and is ready for testing.	
Tast <b>2</b>	Display viser -2. Laser tænder og søger focus. Display viser 02. Focus search ok.	Hvis display forbliver -2: CD søger focus i to forsøg. Tænder laser? Regulerer FE udgangen focus motoramplifier? Regulerer focusmotor?
Key <b>2</b>	Display shows -2. Laser switches on and searches for focus. Display shows 02. Focus search ok.	If display remains -2: CD searches for focus in two attempts. Does laser switch on? Does FE outlet regulate focus motor amplifier? Does focus motor regulate?
Tast <b>3</b>	Display viser 03. CD motor starter, og laser går i startposition.	Hvis CD pladen ikke roterer: Starter RD udgangen turntable motoramplifier? Er MCES pulsen tilstede.
Key <b>3</b>	Display shows 03. CD motor starts up, and laser drives in start position.	If CD does not rotate: Does RD outlet start turntable? Is MCES impulse present.
Tast <b>4</b>	Display viser -4. Radial søgning starter. Display viser 04. Radial søgning ok.	Hvis display forbliver -4: Regulerer RE udgangen radial motoramplifier?
Key <b>4</b>	Display shows -4. Radial searching is started. Display shows 04. Radial searching ok.	If display remains -4: Does RE outlet regulate radial motoramplifier.
Tast <b>5</b>	Display viser 05. Skøjter tilbage over spor.	Springer over 64 spor.
Key <b>5</b>	Display shows 05. Skates back over track.	Skips 64 tracks.
Tast <b>6</b>	Display viser 06. Skøjter frem over spor.	Springer over 64 spor.
Key <b>6</b>	Display shows 06. Skates ahead over track.	Skips 64 tracks.

Ved fejl eller slitage i CD-værket, udskiftes samme (bestillingsnr. 8420148).  
Såfremt serviceprogrammet ønskes *gentaget*, kan dette ske ved to gange at taste Load CD.  
Serviceprogrammet afsluttes ved at taste **0**.

By defects or wear and tear in the CD mechanism, it has to be replaced (part no. 8420148).  
If it is desired to *repeat* the servicing program, this can be done by keying Load CD twice.  
The servicing program is terminated by keying **0**.

Oversigt over IC ben (Dansk)  
Nedenstående skemaer er en kort beskrivelse af funktionen af de vigtigste ben på servo og decoder IC'erne. De steder hvor 2 IC'er har direkte forbindelse med hinanden, er der kun nævnt benet på den ene IC.

31IC6301 MAB 8441

PIN	BEMÆRKNINGER	PLAY POSITION	SERVICE POSITION1	SERVICE POSITION2	SERVICE POSITION3	SERVICE POSITION4	SEARCH POSITION
21	SI (Start Initialization). Når SI er »low«, er laserforsyningen og focus-styring tændt.	»Low«	»High«	»Low«	»Low«	»Low«	»Low«
7	RD (Ready). Med plade på pladeholderen vil RD forblive »high« når focus-punktet er fundet.	»High«	»Low«	»High«	»High«	»High«	»High«
20	SSM (Motor Start-Stop signal). Når RD er gået »high«, vil SSM være »high« i et kort øjeblik (<0,2 sek.), og discmotor forstærkeren tændes (styret af MCES signalet).	136 µS	»Low«	»Low«	136 µS	136 µS	136 µS
8	B0 B1 B2 B3 Tænder radial kontrol. Styrer niveauet på radial servo DAC udgang. I søge position vil der være aktivitet på alle 4 udgange.	»High«	»Low«	»Low«	»Low«	»High«	»Activity«
9		»High«	»High«	»High«	»High«	»High«	»Activity«
10		»High«	»High«	»High«	»High«	»High«	»Activity«
11		»Low«	»Low«	»Low«	»Low«	»Low«	»Activity«
12	TL (Track Loss). TL giver information til 5IC4 om, at tab af spor kan være forestående. 5IC4 kan så give korrektionssignaler med B0-B3.	»High«	»High«	»Low«	»Activity«	»High«	»Activity«
13	RP (Radial Position). RP bestemmer laserarmens position i forhold til sporet, og korrigerer denne ved spring over spor og ved mekaniske stød mod apparatet.				»Activity«		»Activity«
22	DODS (Drop Out Detector Suppression). Når DODS er »low«, har drop out signaler ingen indflydelse på styringen af laserarmen under søg.	»High«	»Low«	»Low«	»Low«	»High«	»Activity«
6	RPU (Radial Pulse). RPU aflader 30C2156 under søg. 30IC2156 virker som hukommelse for stigningsgraden på pladen.	»High«				»High«	»Activity« 0.1 mS/ Div.

31IC6302 SAA 7210

PIN	BEMÆRKNINGER	PLAY POSITION	SERVICE POSITION1	SERVICE POSITION2	SERVICE POSITION3	SERVICE POSITION4	SEARCH POSITION
17	MCES (Motor Control). MCES styrer discmotorens hastighed.	A1/A2	A2	A2	A1/A2	A1/A2	A1/A2
25	HF (High Frequency). Indgang for HF-øje mønster. *Efter lead-in er læst	B (Stable)			B (Unstable)	B* (Stable)	»Activity«
26	HFD (High Frequency Detector). HFD vil gå »low« når HF signalet er for svagt. *Ved afspilning af testplade 5A, vil HFD give »low« pulser på spor med afbrydelser og sorte pletter.	»High«*				»High«	»Activity«
27	CEFM. Spændings-kontrolleret oscillator udgang. *Hvis pladen bremses forsigtigt med hånden, vil oscillator-frekvensen falde.	4.32 MHz*	2.82 MHz	2.82 MHz	4.32 MHz*	4.32 MHz*	4.32 MHz
39	WS (Word Select)	D			D	D	D
38	Clock	D			D	D	D
37	Data	»Activity«				»Activity«	»Activity«
36	E Flag (Error Flag). Indikerer utroværdige samples for 8-sample interpolator.						»Activity«
30 31 29	Q RA (Q-channel Request Acknowledge). Q CL (Q Clock). Q Data Q RA initieres af 5IC4 med »high«, 5IC7 svarer med »low«. Ved forkanten på næste clock puls sættes Q RA »high« igen af 5IC4. Når 5IC4 har modtaget nok information (via Q Data), går Q RA »low«. Dette gør at Q RA tiden varierer.	F F F				F F F	

(Dansk)

PIN	BEMÆRKNINGER	PLAY POSITION	SERVICE POSITION1	SERVICE POSITION2	SERVICE POSITION3	SERVICE POSITION4	SEARCH POSITION
33 35 34	SW (Subcode Word clock). SC (Subcode Clock). SD (Subcode DATA) Efter Motor Start Pulse vil Subcode Word Clock være synlig. Medens en burst på 10 clock pulser er synlig på SC, overføres Q-channel information på SD. Herefter følger P-bit indikation. P-bit indikationen kommer mellem 2 bursts på 10 clock pulser. Ved pause er P-bit indikationen »high« og ved musik er den »low«.	G			G	G	
28	CRI (Counter Reset Inhibit). CRI er »low« ved spring over spor.	»High«				»High«	»Activity«
32	DEEM (Deemphasis). »Low« ved afspilning af testplade 5 spor 14. »High« ved afspilning af testplade 5 spor 15.						
19	OSC. Indgang fra krystal oscillator.	11.28 MHz	11.28 MHz			11.28 MHz	
11	MUTE. Muter audio signalet	»High«				»High«	»High«
22	PD/OC (Phase Detector/Oscillator Control). Pulser fra fasedetektorens udgang integreres og regulerer oscillatorfrekvensen.						
23	IREF. Strøm reference til fasedetektoren.						
24	FB (Feed Back). Fastholder data slicerens arbejds punkt.						

31IC6304 SAA 7220

PIN	BEMÆRKNINGER	PLAY POSITION	SERVICE POSITION1	SERVICE POSITION2	SERVICE POSITION3	SERVICE POSITION4	SEARCH POSITION

17	LO (Laser Out).	»High«	»Low«	»High«	»High«	»High«	»High«
16	LM (Laser Monitor) Via LM styres strømforsyningen til laser dioden.	200 mV ±50 mV		200 mV ±50 mV			
5	FE (Focus Error). FE styrer focus enheden. Når SI går »high« søges der efter focus punktet. Når apparatet sættes i serviceposition 2 uden plade, vil optikket søge efter focus punktet. På ben 5 vil FE signalet variere mellem 0 V og +4 V.						
9	D1 D2 D3 D4 D1→D4 er korrektionssignaler for fotodiode kredsløbet. Hvis pladen bevæges når apparatet er i serviceposition 2, skal focusenheden holde focus. Når pladen bevæges, skal der være varierende signaler på ben 7, 8, 9 og 10.						
10							
8							
7							
3	HF (High Frequency). HF information fra de 4 fotodioder.						
27	HF out (High Frequency out). HF out er et forstærket informationssignal til decoderen. *Efter lead-in er læst.	B (Stable)			B (Unstable)	B* (Stable)	
26	DET (Detector).						
19	HFD (High Frequency DETECTOR).						
18	TL (Track Loss). DET giver information om HF signalets niveau til niveau/drop-out detektoren i 30IC6101. Når HF signalets niveau er for lavt, vil HFD gå »low«. TL vil så gå »low« som information til 5IC4 om at sporings signalerne er upålidelige.						
11	RE1 (Radial Error). RE1-2 er styresignaler til sporing af laseren.					J	
12	RE2						
25	SC (Start Capacitor). *Stiger til +5 V hvis focus-punktet er fundet.		-5 V	*	+5 V	+5 V	
6	FE lag (Focus Error). *Når pladen bevæges, vil signalet variere.			*	Approx. 100 mVpp		
13	AGC. *Ved maksimum HF signal ≤400 mV. Ved ingen HF signal +5 V.	*	»High«	»High«	*	*	

30IC6102 TDA 5709 (Radial Servo)

PIN	BEMÆRKNINGER	PLAY POSITION	SERVICE POSITION 1	SERVICE POSITION 2	SERVICE POSITION 3	SERVICE POSITION 4	SEARCH POSITION
10	DAC (Digital to Analogue Converter). DAC styrer hastigheden på spring over spor. Signalet er genereret af B0-B3. *Når man banker forsigtigt på apparatet vil der være aktivitet.	*			»Low«	*	»Activity«
7	RE (Radial Error). RE holder lyspletten på sporet. *En 650 Hz sinus vil være synlig i RE signalet.	*				*	
8	RE lag (Radial error for lag network). 30C2156 i RE lag kredsløbet har en hukommelsesfunktion. Den husker stigningsgraden på pladen. Når der springes til et givet spor på pladen, skal denne hukommelse tømme. Det gøres med 5IC4 via 30TR6109. *En 650 Hz sinus vil være synlig i RE lag signalet.	*				*	
4	D factor. (Offset control). Typisk 0V.	Min.Gain -2.5V	+4		-0.5V	-1V/-1.5V	
5	K factor. (Gain control). Typisk -1V/-1.5V.	Max.Gain -0.5V					

IC pin survey (English)

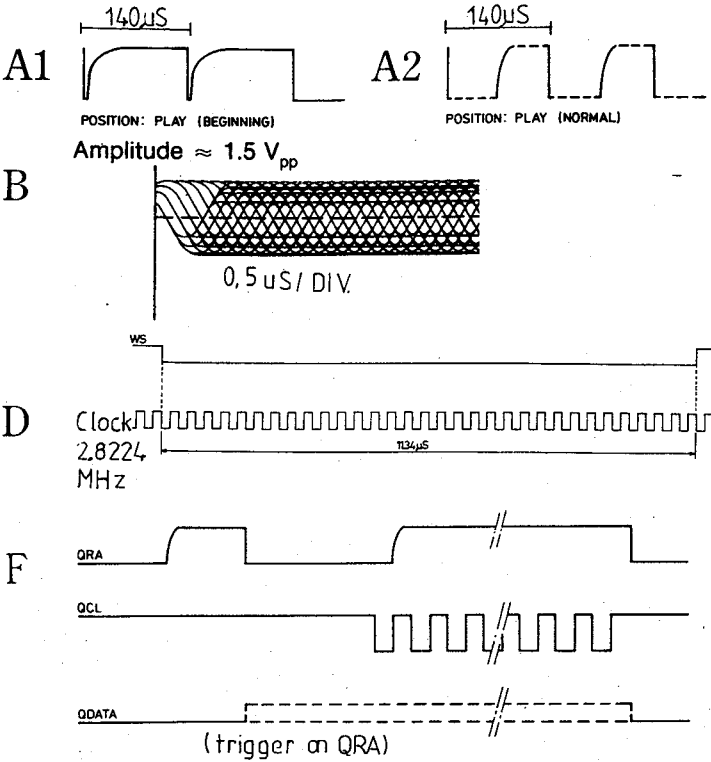

The following surveys briefly describes the function of the most important pins of the servo and decoder IC's.  
Where 2 IC's are directly connected, only the pin of one IC is mentioned.

31IC6301 MAB 8441

PIN	REMARKS	PLAY POSITION	SERVICE POSITION1	SERVICE POSITION2	SERVICE POSITION3	SERVICE POSITION4	SEARCH POSITION
21	SI (Start Initialization). When SI is 'low' the laser supply and the focus control are switched on.	»Low«	»High«	»Low«	»Low«	»Low«	»Low«
7	RD (Ready). With a disc on the turntable, RD stays 'high', when the focal point has been found.	»High«	»Low«	»High«	»High«	»High«	»High«
20	SSM (Motor Start-Stop signal). After the RD has passed to 'high', the SSM will be high for a short moment (<0.2 sec.) and the disc motor amplifier will be switched on (controlled by the MCES signal).	136 µS	»Low«	»Low«	136 µS	136 µS	136 µS
8	B0 } Switches on the radial control. Controls the level on the radial servo DAC output. In search mode, there should be activity on all 4 pins.	»High«	»Low«	»Low«	»Low«	»High«	»Activity«
9		»High«	»High«	»High«	»High«	»High«	»Activity«
10		»High«	»High«	»High«	»High«	»High«	»Activity«
11		»Low«	»Low«	»Low«	»Low«	»Low«	»Activity«
12	TL (Track Loss). TL tells 5IC4 that track loss may be imminent. 5IC4 can give correction signals with B0-B3.	»High«	»High«	»Low«	»Activity«	»High«	»Activity«
13	RP (Radial Position). RP determines the position of the arm relative to the track and it corrects this in case of track jumping or bumping against the player				»Activity«		»Activity«
22	DODS (Drop Out Detector Suppression). When DODS is 'low', drop-out signals do not influence the arm control during track search.	»High«	»Low«	»Low«	»Low«	»High«	»Activity«
6	RPU (Radial Pulse). During track search, RPU clears 30C2156. 30C2156 memorizes the degree of inclination of the disc.	»High«				»High«	»Activity« 0.1 mS/ Div.

(English)

PIN	REMARKS	PLAY POSITION	SERVICE POSITION1	SERVICE POSITION2	SERVICE POSITION3	SERVICE POSITION4	SEARCH POSITION
30 31 29	QRA (Q-channel Request Acknowledge). QCL (Q Clock). QData QRA is initiated by 5IC4 with 'high', 5IC7 answers with 'low'. With the next leading clock pulse (Q CL), the QRA is set 'high' again by 5IC4. When 5IC6 has taken enough information (via Q Data), QRA will go 'low'. This makes the QRA times vary each time.	F F F				F F F	
33 35 34	SW (Subcode Word clock). SC (Subcode Clock). SD (Subcode DATA) After Motor Start Pulse, Subcode Word Clock is visible. While the burst of 10 clock pulses appear on SC, the Q-channel information is transferred on SD. Hereafter the P-bit indication follows. The P-bit is 'high' between two bursts of 10 clock pulses in case of pause indication, and 'low' in case of music indication. There will be P-bit indication between two bursts of 10 clock pulses. The P-bit indication is 'high' during pause and 'low' during music.	G			G	G	
28	CRI (Counter Reset Inhibit). CRI is 'low' in case of track jumping.	»High«				»High«	»Activity«
32	DEEM (Deemphasis). 'Low' when playing test disc 5 track no. 14 'High' when playing test disc 5 track no. 15						
19	OSC. Input from crystal oscillator.	11.28 MHz	11.28 MHz			11.28 MHz	
11	MUTE. Mutes the audio signal	»High«				»High«	»High«
22	PD/OC (Phase Detector/Oscillator Control). Pulses from the output of the phasedetector are integrated and controls the oscillatorfrequency.						
23	IREF. Current reference for the phasedetector.						
24	FB (Feed Back). Keeps the operating point for the data slicer.						

31IC6304 SAA 7220

PIN	REMARKS	PLAY POSITION	SERVICE POSITION1	SERVICE POSITION2	SERVICE POSITION3	SERVICE POSITION4	SEARCH POSITION
18 16 15	WS (Word Select) Clock Data	I  »Activity«	I  »Stable«	I  »Stable«	I  »Stable«	I  »Activity«	I  »Activity«
22	ATSB (Attenuation Audio Signal). At 'low', the signal is lowered by 12 dB						
23	MUSB (Soft Mute). MUSB is 'low' when jumping from one track to another. *Will be 'high' during search in service position 4.	»High«				»High«	*»Low«
14	DOBM (Digital Output). Error corrected audio and subcode data.						

30IC6101 TDA 5708 (Focus Servo) (English)

PIN	REMARKS	PLAY POSITION	SERVICE POSITION 1	SERVICE POSITION 2	SERVICE POSITION 3	SERVICE POSITION 4	SEARCH POSITION
17	LO (Laser Out).	»High«	»Low«	»High«	»High«	»High«	»High«
16	LM (Laser Monitor) Via the LM the power supply for the laser diode is controlled.	200 mV ±50 mV		200 mV ±50 mV			
5	FE (Focus Error). FE drives the focusing unit. When the SI goes 'high', the focusing unit will search for the focal point. When the player is brought into servicing position 2 without disc, the objective will search for the focal point. At pin 5 the FE signal varies between 0 V and +4 V.						
9	D1 } D2 } D1→D4 are the error signals from the photodetector circuits. When the disc is moved while the disc is in service position 2, the focusing unit should keep the laser beam in focus. When the disc is moving, there should be a changing signal on pins 7, 8, 9 and 10. D3 } D4 }						
10							
8							
7							
3	HF (High Frequency). HF information from the 4 photodiodes.						
27	HF out (High Frequency out). HF out is the amplified information signal for the decoder. *After lead-in has been read.		B (Stable)			B (Unstable)	B* (Stable)
26	DET (Detector).						
19	HFD (High Frequency DETECTOR).						
18	TL (Track Loss). DET gives information on the level of the HF signal to the level/drop-out detector in 30IC6101. When the level of the HF signal is too low, HFD will go 'low'. TL will then go 'low' in order to tell 5IC4 that the tracking signals are unreliable.						
11	RE1 (Radial Error). RE1-2 are the control signals for the arm during tracking.					J	
12	RE2						
25	SC (Start Capacitor). *Rises to +5 V if focus point is found.		-5 V	*	+5 V	+5 V	
6	FE lag (Focus Error). *When the disc is moved by hand, the signal will vary.			*	Approx. 100 mVpp		
13	AGC. *At maximum HF signal ≤400 mV. At no HF signal +5 V.	*	»High«	»High«	*	*	

30IC6102 TDA 5709 (Radial Servo)

PIN	REMARKS	PLAY POSITION	SERVICE POSITION 1	SERVICE POSITION 2	SERVICE POSITION 3	SERVICE POSITION 4	SEARCH POSITION
10	DAC (Digital to Analogue Converter). DAC controls the track jumping speed. The signal is derived from the signals B0-B3. *Knock carefully on the set, and there should be activity.	*			»Low«	*	»Activity«
7	RE (Radial Error). RE keeps the light spot on the track. *A 650 Hz sine wave should be visible in the RE signal.	*				*	
8	RE lag (Radial error for lag network). 30C2156 in the RE lag circuit has a memory function. It memorizes the degree of inclination on the disc. When a jump is made to a certain track on the disc, the memory should be cleared. This is done by 5IC4 via 30TR6109. *A 650 Hz sine wave should be visible in the RE lag signal.	*				*	
4	D factor. (Offset control). Typically 0V.	Min.Gain -2.5V	+4		-0.5V	-1V/-1.5V	
5	K factor. (Gain control). Typically -1V/-1.5V.	Max.Gain -0.5V					

Slutafprøvning 25xx

Denne afprøvning bør benyttes som slutkontrol efter endt reparation, og sikrer at hovedparten af Beocenterens funktioner er i orden.

Tilslut Beocenter 8500/9500 til lysnet.

Punktum i display lyser.

Udfør lysdiodekontrol ifølge testprogram.  
Se side 7-6 i servicemanual.

Final Testing of 25xx

This testing procedure should be used as a final check after completion of repairs to ensure that the majority of the Beocenter's functions are in working order.

Connect Beocenter 8500/9500 to mains.

Stand-by diode lights up.

Perform LED check as per testing program.  
See page 7-6 in servicing manual.

## WIRING OF TRANSFORMER

Beocenter 8000, Type 2551, 2552

Beocenter 8500, Type 2511, 2514, 2515

Beocenter 9500, Type 2506, 2507, 2510

Transformer (8013509) kan tilkobles enten 230V~ eller 240V~ 50 Hz, netspænding. Netledningerne påloddet de indrammede loddespyd:

Der Transformator (8013509) kann entweder an 220V oder 240V (50 Hz) Netzspannung angeschlossen werden.  
Die Netzleitung ist an den gekennzeichneten Lötspitzen anzulöten.

Transformer (8013509) can be connected to either 230V~ or 240V~ (50 Hz). Mains voltage. Solder the mains lead to the solder pads shown on the illustration.

Il est possible de raccorder le transformateur (8013509) à une tension secteur de 220 ou 240 V, 50 Hz.  
Souder le cordon d'alimentation aux pastilles encadrées.

## ISOLATIONSTEST

Ethvert apparat **skal** isolationstestes efter at det har været adskilt. Testen udføres når apparatet igen er helt samlet og klar til udlevering til kunden.

### Isolationstest for Beocenter 8500/9500

Isolationstesten udføres på følgende måde:

De to stikben på netstikket kortsluttes og tilsluttes en af terminalerne på isolationstesteren. Den anden terminal fra isolationstesteren tilsluttes stelbenet i hovedtelefonstikdåsen.

#### OBS!

For at undgå beskadigelser på apparatet er det vigtigt, at begge terminaler fra isolationstesteren har virkelig god mekanisk kontakt.

Der drejes nu langsomt med spændingsreguleringen op isolationstesteren indtil en spænding på 1,5 - 2 kV er opnået. Her skal den holdes i 1 sekund, derefter drejes der langsomt ned for spændingen igen.

Der må ikke på noget tidspunkt under testen forekomme overslag.

## INSULATION TEST

Each set **must** be insulation tested after dismantling. The test is to be performed when the set has been re-assembled and is ready for delivery to the customer.

### Insulation test for Beocenter 8500/9500

Make the insulation test as follows: Short-circuit the two plug pins of the mains plug and connect one of the terminals of the insulation tester. Connect the other terminal of the insulation tester to the chassis pin of the headphone socket.

#### N.B.!

To avoid ruining the set, it is essential that both insulator test terminals are in really good mechanical contact.

Now turn slowly the voltage control of the insulation tester until a voltage of 1.5 - 2 kV is obtained. Hold it there for 1 second, then turn slowly the voltage down again.

At no point during the testing procedure any flash-overs are permissible.

## MEKANISKE JUSTERINGER

### Højde og azimuth

For at opnå korrekt højdejustering skal højdeværktøj bestillingsnr. 3624026 benyttes.

En tilnærmet justering kan opnås med en spejlkasette.

## MECHANICAL ADJUSTMENTS

### Height and azimuth

To obtain correct height adjustment, height adjustment tool part no. 3624026 must be used.

Approximate adjustment can be obtained using a mirror cassette.

### Højde båndstyr

Ilæg justerværktøj 1 og 2.

Tryk »Tape 1«.

NB! På grund af virkningen fra autostoppet kører tonehovedbroen ud umiddelbart efter at den er kørt ind.

Juster henholdsvis A og D sådan at justerværktøj 1 kan skubbes ind i båndstyrene.

### Height, tape guide

Insert adjustment tools 1 and 2.

Press "Tape 1".

NB! Due to the effect from the auto stop the tape head base travels out immediately after it has travelled in.

Adjust A and D so that adjustment tool 1 can be pushed into the tape guides.

### Azimuth side 1

Ilæg azimuth bånd bestillingsnr. 6780036.

De to Y indgange på et oscilloskop tilsluttes højre og venstre AUX udgang.

Tryk »Tape 1«, og skruen C justeres til de 2 kurver på oscilloskopet er i medfase ved max. amplitude.

### Azimuth side 1

Load azimuth tape part no. 6780036.

Connect the two Y inputs on an oscilloscope to right and left AUX outputs.

Press "Tape 1" and adjust screw C until the 2 curves on the oscilloscope are in phase at maximum amplitude.

### Azimuth side 2

Tryk »Turn«.

Justeringen gøres som azimuth side 1, blot justeres der med skruen B.

### Azimuth side 2

Press "Turn".

Adjustment as for side 1 but using screw B.

## MECHANISCHE EINSTELLUNGEN

### Höhe und Azimut

Zur Erzielung korrekter Höheneinstellung ist Höhenwerkzeug Bestellnr. 3624026 zu benutzen.

Eine angenäherte Einstellung ist mit einer Spiegel-cassette möglich.

## RECLAGES MECANIKES

### Hauteur et azimut

Pour obtenir un réglage correct de la hauteur, il convient d'utiliser l'outil réf. 3624026.

Un réglage approximatif peut être obtenu avec une cassette à miroir.

### Höhe Bandführung

Justierwerkzeug 1 und 2 einlegen.

„Tape 1“ drücken.

ACHTUNG! Wegen der Einwirkung durch die automatische Abschaltung fährt die Tonkopfsplatte wieder aus, unmittelbar nachdem sie eingefahren ist.

Justieren Sie A bzw. D, so dass Justierwerkzeug 1 in die Bandführungen hineingeschoben werden kann.

### Hauteur du guide-bande

Introduire les outils de réglage 1 et 2.

Appuyer sur «Tape 1».

N.B.: L'arrêt automatique fait ressortir les têtes magnétiques dès leur entrée.

Régler A et D pour obtenir un positionnement tellement que l'outil de réglage 1 peut être poussé dans les guide-bandes.

### Azimut Seite 1

Azimut-Band, Bestell-Nr. 6780036, einlegen.

Die beiden Y-Eingänge eines Oszillographen an den rechten und linken AUX-Ausgang anschließen.

„Tape 1“ drücken und die Schraube C einstellen, bis die beiden Kurven des Oszillographen bei Maximalamplitude in Phasenübereinstimmung sind.

### Azimut face 1

Introduire la bande azimutale réf. 6780036.

Raccorder les deux entrées Y d'un oscilloscope aux sorties AUX droite et gauche.

Appuyer sur «Tape 1» et régler la vis C jusqu'à avoir les 2 courbes de l'oscilloscope en phase à l'amplitude maximale.

### Azimut Seite 2

„Turn“ drücken.

Die Justierung wie bei Azimut Seite 1, jedoch mit der Schraube B, ausführen.

### Azimut face 2

Appuyer sur «Turn».

Le réglage se fait comme pour l'azimut face 1 mais avec la vis B.

## ELEKTRISKE JUSTERINGER

## Hastighed

Ilæg wow bånd bestillingsnr. 67780037. (Justeringen skal foretages midt på båndet).

## ELECTRICAL ADJUSTMENTS

## Speed

Load wow tape part no. 6780037. (The adjustment should be made in a mid-tape position).

Tilslut wow meter med driftmeter til AUX stikket.

Tryk TAPE 1, måleresultatet aflæses og noteres.

Tryk TURN, og den anden side af båndet afspilles, måleresultatet aflæses og noteres.

Middelværdien af de to tal udregnes.

Hvis måleresultaterne er negative, lægges middelværdien til det højeste af de to tal, og potentiometeret SFR1 på printet under løbeværket justeres til det udregnede resultat. SFR1 er tilgængelig gennem hullet i printet under løbeværket.

Hvis måleresultaterne er positive, trækkes middelværdien fra det højeste af de to tal, og potentiometeret SFR1 på printet under løbeværket justeres til det udregnede resultat.

Connect wow meter with drift meter to the AUX socket.

Press TAPE 1, read off and note down reading.

Press TURN and play other side of tape, read off and note down reading.

Calculate the mean of the two figures.

If the values obtained are negative, add the mean value to the higher of the two figures. Adjust potentiometer SFR1 on the PCB under the tape transport mechanism to the value calculated. SFR1 is accessible through the hole in the PCB under the tape transport mechanism.

If the values obtained are positive, subtract the mean value from the higher of the two figures. Adjust potentiometer SFR1 on the PCB under the tape transport mechanism to the value calculated.

## ELEKTRISCHE EINSTELLUNGEN

### Geschwindigkeit

Wow-Tonband Bestellnr. 6780037 wird eingelegt. (Die Einstellung hat mitten auf dem Tonband zu erfolgen).

## ERGLAGES ELECTRIQUES

### Vitesse

Introduire la bande de pleurage réf. 6780037 (le réglage doit être réalisé au milieu de la bande).

Wow-Meter mit Driftmeter wird an die AUX-buchse angeschlossen.

Drücken Sie auf TAPE 1. Das Meßergebnis wird abgelesen und notiert.

Drücken Sie auf TURN. Danach wird die andere Seite des Tonbandes gespielt. Das Meßergebnis wird abgelesen und notiert.

Der Mittelwert der beiden Ergebnisse wird gefunden.

Falls die Meßergebnisse negativ sind, wird der Mittelwert zu dem höheren der beiden gefundenen Werte addiert. Stellen Sie Potentiometer SFR1 auf der PCB dem Laufwerk auf das berechnete Ergebnis ein. SFR1 ist durch Loch auf der PCB unter dem Laufwerk zugänglich.

Falls die Meßergebnisse positiv sind, wird der Mittelwert von dem höheren der beiden gefundenen Werte abgezogen. Stellen Sie Potentiometer SFR1 auf der PCB unter dem Laufwerk auf das berechnete Ergebnis ein.

Raccorder le fluctuomètre présentant un mesureur de dérive à la fiche de AUX.

Effleurer la touche TAPE 1. Lire et relever le résultat.

Effleurer la touche TURN pour lire la seconde face de la bande. Lire et relever le résultat.

Calculer la valeur moyenne de ces deux mesures.

Si les résultats sont négatifs, ajouter la valeur moyenne au chiffre le plus élevé des deux relevés. Régler le potentiomètre SFR1 sur le PCB sous le dérouleur pour obtenir la valeur ainsi calculée. SFR1 est accessible au trou sur le PCB sous le dérouleur.

Si les résultats sont positifs, déduire la valeur moyenne du chiffre le plus élevé des deux relevés. Régler le potentiomètre SFR1 sur le PCB sous le dérouleur pour obtenir la valeur calculée.

## Optagehæv

Gøres som beskrevet side 5-8, blot skal 20L200 (20L400) justeres til der måles 1,05V RMS.

For andre elektriske justeringer, se afsnit 5.

## Recording boost

Carry out adjustment as described on page 5-8, only 20L200 (20L400) must be adjusted to measure 1,05V RMS.

See section 5 for further electrical adjustments.

## **Aufnahmeanhebung**

Wird wie auf Seite 5-9 beschrieben unternommen, nur muss 20L200 (20L400) eingestellt werden bis 1,05V RMS gemessen wird.

Für übrige elektrische Einstellungen, sehen Sie Abschnitt 5.

## **Augmentation du niveau d'enregistrement**

Faire des réglages comme décrit sur page 5-9, mais il faut régler 20L200 (20L400) pour obtenir la valeur 1,05V RMS.

Pour les autres réglages électriques voir section 5.

**SERVICETIPS**

Afmontering af PCB under løbeværk.

**SERVICE TIPS**

Dismantling of PCB under tape transport mechanism.

Afmonter remmen A.

Lod loddepunkter B fri.

Pres låsetappen C i pilens retning, og træk PCB'en ud.

Remove the belt A.

Desolder the solder points B.

Push the locking pin C in the direction of the arrow and pull out the PCB.

**Smøreskema**

Behovet for eftersmøring er minimalt.

Ved større eftersyn og ved udskiftning af mekaniske dele bør nedenstående retningslinier følges.

NB! Smøremidlet bør kun påføres i lille mængde.

**Lubrication Chart**

The need for relubrication is negligible.

In the case of overhauls and when replacing mechanical parts the directions below should be followed.

NB! The lubricant should only be applied in small quantities.

Kapstanlejer	3984022 Floil GB TS-1
Aksler for spoletallerkener 9412 og 9447.	
Leje for remskiver 9487.	
Aksel på tonehoved 94H1.	
Glideflader mellem andre bevægelige dele.	3984030 Barrierta L5512 (25gr.)

Capstan bearings	3984022 Floil GB TS-1
Shafts for turntables 9412 and 9447.	
Bearing for pulleys 9487.	
Shaft on tapehead 94H1.	
Sliding surfaces between other movable parts.	3984030 Barrierta L5512 (25gr.)

## SERVICETIPS

Abnahme von Printplatte unter das Laufwerk.

## CONSEILS DE REPARATION

Démontage du PCB sous le dérouleur.

Den Riemen A abnehmen.

Die Lötunkte B freilöten.

Den Verriegelungszapfen C in Richtung des Pfeils ziehen, und die PCB ausziehen.

Enlever la courroie A.

Desolder les points à soudage B.

Pousser le goujong d'arrêt à la direction de la flèche C et soulever le PCB.

## Schmierplan

Der nachträgliche Schmierbedarf ist minimal. Bei größeren Inspektionen und beim Austausch von mechanischen Teilen sollten die nachstehenden Richtlinien befolgt werden. WICHTIG! Das Schmiermittel darf nur in geringer Menge aufgetragen werden.

## Schéma de lubrification

Les nécessités de graissage sont minimales, mais lors d'une vérification importante et du remplacement de parties mécaniques essentielles, il est indispensable d'observer les règles indiquées ci-dessous.

REMARQUE! N'appliquer qu'une quantité très limitée de lubrifiant.
